

OUTCOME BASED EDUCATION WITH CHOICE BASED CREDIT SYSTEM

MASTER OF TECHNOLOGY AEROSPACE ENGINEERING

ACADEMIC REGULATIONS, COURSE CATALOG AND SYLLABI PG21

M.Tech Regular Two Year Degree Program (for the batches admitted from the academic year 2021 - 2022)

These rules and regulations may be altered/changed from time to time by the academic council FAILURE TO READ AND UNDERSTAND THE RULES IS NOT AN EXCUSE

INSTITUTE VISION | MISSION | QUALITY POLICY

VISION

To bring forth professionally competent and socially sensitive engineers, capable of working across cultures meeting the global standards ethically.

MISSION

To provide students with an extensive and exceptional education that prepares them to excel in their profession, guided by dynamic intellectual community and be able to face the technically complex world with creative leadership qualities.

Further, be instrumental in emanating new knowledge through innovative research that emboldens entrepreneurship and economic development for the benefit of wide spread community.

QUALITY POLICY

Our policy is to nurture and build diligent and dedicated community of engineers providing a professional and unprejudiced environment, thus justifying the purpose of teaching and satisfying the stake holders.

A team of well qualified and experienced professionals ensure quality education with its practical application in all areas of the Institute.

DEPARTMENT VISION | MISSION

VISION

To build a strong community of dedicated graduates with expertise in the field of aeronautical science and engineering suitable for industrial needs having a sense of responsibility, ethics and ready to participate in aerospace activities of national and global interest.

MISSION

To actively participate in the technological, economic and social development of the nation through academic and professional contributions to aerospace and aviation areas, fostering academic excellence and scholarly learning among students of aeronautical engineering.

M.TECH (AEROSPACE ENGINEERING) - PROGRAM EDUCATIONAL OBJECTIVES (PEO's)

The students of M.Tech Aerospace Engineering are prepared to:

- PEO I Obtain employment in industry, government institutions, small businesses, or organizations successfully using the skills they acquired in aerospace engineering and related fields.
- PEO II Pursue Doctoral degree and to conduct research at various Universities/Institutions.
- PEO III Apply their in-depth knowledge in Computational Mechanics / Fluid Dynamics to evaluate, analyze and synthesize existing and novel designs of aerospace components and systems.
- PEO IV Contribute to the advancement of aerospace engineering, science or related fields through new discoveries, solving problems, program management or by educating/mentoring others.

M.TECH - PROGRAM OUTCOMES (PO's)

Upon completion of M.Tech Degree, the students will be able to:

- PO 1 Independently carry out research/investigation and development work to solve practical problems.
- PO 2 Write and present a substantial technical report/document
- PO 3 Demonstrate a degree of mastery in emerging areas of Aerospace Engineering such as Aerodynamics, Propulsion, Structure and Flight Dynamics
- PO 4 Identify, formulate, analyse and Design complex engineering problems, and design system components or processes by applying appropriate advanced principles of engineering activities and using modern tools
- PO 5 Engage in life-long learning and professional development through self-study and continuing education in understanding the engineering solutions in global and management principles to manage projects in multidisciplinary environments.
- PO 6 Function effectively as a member or leader in diverse teams to carry out development work, produce solutions that meet the specified needs with frontier technologies and communicate effectively on complex engineering activities.

"Take up one idea.

Make that one idea you're life-think of it, dream of it, and live on that idea. Let the brain muscles, nerves, every part of your body be full of that idea and just leave every other idea alone. This is the way to success" Swami Vivekananda

PRELIMINARY DEFINITIONS AND NOMENCLATURES

Academic Council: The Academic Council is the highest academic body of the institute and is responsible for the maintenance of standards of instruction, education and examination within the institute. Academic Council is an authority as per UGC regulations and it has the right to take decisions on all academic matters including academic research.

Academic Autonomy: Means freedom to an institute in all aspects of conducting its academic programs, granted by UGC for Promoting Excellence.

Academic Year: It is the period necessary to complete an actual course of study within a year. It comprises two consecutive semesters i.e., Even and Odd semester.

AICTE: Means All India Council for Technical Education, New Delhi.

Autonomous Institute: Means an institute designated as autonomous by University Grants Commission (UGC), New Delhi in concurrence with affiliating University (Jawaharlal Nehru Technological University, Hyderabad) and State Government.

Backlog Course: A course is considered to be a backlog course if the student has obtained a failure grade (F) in that course.

Basic Sciences: The courses offered in the areas of Mathematics, Physics, Chemistry, Biology etc., are considered to be foundational in nature.

Betterment: Betterment is a way that contributes towards improvement of the students' grade in any course(s). It can be done by either (a) re-appearing or (b) re-registering for the course.

Board of Studies (BOS): BOS is an authority as defined in UGC regulations, constituted by Head of the Organization for each of the departments separately. They are responsible for curriculum design and updation in respect of all the programs offered by a department.

Certificate course: It is a course that makes a student gain hands-on experience and skill required for holistic development in a specific area/field.

Choice Based Credit System: The credit based semester system is one which provides flexibility in designing curriculum and assigning credits based on the course content and hours of teaching along with provision of choice for the student in the course selection.

Compulsory course: Course required to be undertaken for the award of the degree as per the program.

Commission: Means University Grants Commission (UGC), New Delhi.

Continuous Internal Examination: It is an examination conducted towards internal assessment.

Course: A course is a subject offered by the University for learning in a particular semester.

Course Outcomes: The essential skills that need to be acquired by every student through a course.

Credit: A credit is a unit that gives weight to the value, level or time requirements of an academic course. The number of 'Contact Hours' in a week of a particular course determines its credit value. One credit is equivalent to one lecture hour per week.

Credit point: It is the product of grade point and number of credits for a course.

Cumulative Grade Point Average (CGPA): It is a measure of cumulative performance of a student over all the completed semesters. The CGPA is the ratio of total credit points secured by a student in various courses in all semesters and the sum of the total credits of all courses in all the semesters. It is expressed up to two decimal places.

Curriculum: Curriculum incorporates the planned interaction of students with instructional content, materials, resources and processes for evaluating the attainment of Program Educational Objectives.

Degree with Specialization: A student who fulfills all the program requirements of her/his discipline and successfully completes a specified set of professional elective courses in a specialized area is eligible to receive a degree with specialization like Structural Engineering, Embedded Systems, CSE, etc.

Department: An academic entity that conducts relevant curricular and co-curricular activities, involving both teaching and non-teaching staff and other resources in the process of study for a degree.

Detention in a course: Student who does not obtain minimum prescribed attendance in a course shall be detained in that particular course.

Dropping from the Semester: A student who doesn't want to register for any semester can apply in writing in prescribed format before commencement of that semester.

Elective Course: A course that can be chosen from a set of courses. An elective can be Professional Elective and/or Open Elective.

Evaluation: Evaluation is the process of judging the academic performance of the student in her/his courses. It is done through a combination of continuous internal assessment and semester end examinations.

Grade: It is an index of the performance of the students in a said course. Grades are indicated by alphabets.

Grade Point: It is a numerical weight allotted to each letter grade on a 10 point scale.

Institute: Means Institute of Aeronautical Engineering, Hyderabad unless indicated otherwise by the context.

Massive Open Online Course (MOOC): MOOC courses inculcate the habit of self learning. MOOC courses would be additional choices in all the elective group courses.

Pre-requisite: A course, the knowledge of which is required for registration into higher level course.

Core: The courses that are essential constituents of each engineering discipline are categorized as professional core courses for that discipline.

Professional Elective: A course that is discipline centric. An appropriate choice of minimum number of such electives as specified in the program will lead to a degree with specialization.

Program: Means, Master of Technology (M.Tech) degree program / UG degree program: B.Tech.

Program Educational Objectives: The broad career, professional and personal goals that every student will achieve through a strategic and sequential action plan.

Project work: It is a design or research based work to be taken up by a student during his/her second year to achieve a particular aim. It is a credit based course and is to be planned carefully by the student.

Re-Appearing: A student can reappear only in the semester end examination for the theory component of a course, subject to the regulations contained herein.

Registration: Process of enrolling into a set of courses in a semester of a Program.

Regulations: The regulations, common to all M.Tech programs offered by Institute are designated as "PG21" and are binding on all the stakeholders.

Semester: It is a period of study consisting of 15 to 18 weeks of academic work equivalent to normally 90 working days. The odd semester starts usually in July and even semester in December.

Semester End Examinations: It is an examination conducted for all courses offered in a semester at the end of the semester.

S/he: Means "she" and "he" both.

Student Outcomes: The essential skill sets that need to be acquired by every student during her/his program of study. These skill sets are in the areas of employability, entrepreneurial, social and behavioral.

University: Means the Jawaharlal Nehru Technological University Hyderabad, Hyderabad.

Withdraw from a Course: Withdrawing from a course means that a student can drop from a course within the first two weeks of the odd or even semester (deadlines are different for summer sessions). However s/he can choose a substitute course in place of it by exercising the option within 5 working days from the date of withdrawal.

Words 'he', him', 'his', occur, they imply 'she', 'her', 'hers' also.

FOREWORD

The autonomy is conferred to Institute of Aeronautical Engineering (IARE), Hyderabad by University Grants Commission (UGC), New Delhi based on its performance as well as future commitment and competency to impart quality education. It is a mark of its ability to function independently in accordance with the set norms of the monitoring bodies like J N T University Hyderabad (JNTUH), Hyderabad and AICTE. It reflects the confidence of the affiliating University in the autonomous institution to uphold and maintain standards it expects to deliver on its own behalf and thus awards degrees on behalf of the college. Thus, an autonomous institution is given the freedom to have its own **curriculum, examination system and monitoring mechanism**, independent of the affiliating University but under its observance.

IARE is proud to win the credence of all the above bodies monitoring the quality in education and has gladly accepted the responsibility of sustaining, if not improving upon the standards and ethics for which it has been striving for more than a decade in reaching its present standing in the arena of contemporary technical education. As a follow up, statutory bodies like Academic Council and Boards of Studies are constituted with the guidance of the Governing Body of the institute and recommendations of the JNTUH to frame the regulations, course structure and syllabi under autonomous status.

The autonomous regulations, course structure and syllabi have been prepared after prolonged and detailed interaction with several expertise solicited from academics, industry and research, in accordance with the vision and mission of the institute to order to produce a quality engineering graduate to the society.

All the faculty, parents and students are requested to go through all the rules and regulations carefully. Any clarifications needed are to be sought at appropriate time and with principal of the college, without presumptions, to avoid unwanted subsequent inconveniences and embarrassments. The Cooperation of all the stake holders is sought for the successful implementation of the autonomous system in the larger interests of the college and brighter prospects of engineering graduates.

PRINCIPAL

M.Tech. Regular Two Year Degree Program (for the batches admitted from the academic year 2021 - 22)

For pursuing two year postgraduate Master Degree program of study in Engineering (M.Tech) offered by Institute of Aeronautical Engineering under Autonomous status and herein after referred to as IARE.

1.0 CHOICE BASED CREDIT SYSTEM

The Indian Higher Education Institutions (HEI's) are changing from the conventional course structure to Choice Based Credit System (CBCS) along with introduction to semester system at first year itself. The semester system helps in accelerating the teaching learning process and enables vertical and horizontal mobility in learning.

The credit based semester system provides flexibility in designing curriculum and assigning credits based on the course content and hours of teaching. The choice based credit system provides a 'cafeteria' type approach in which the students can take courses of their choice, learn at their own pace, undergo additional courses and acquire more than the required credits and adopt an interdisciplinary approach to learning.

Choice Based Credit System (CBCS) is a flexible system of learning and provides choice for students to select from the prescribed elective courses. A course defines learning objectives and learning outcomes and comprises of lectures / tutorials / laboratory work / field work / project work /mini project work with seminar/ viva / seminars / presentations / self-study etc. or a combination of some of these.

Under the CBCS, the requirement for awarding a degree is prescribed in terms of number of credits to be completed by the students.

The CBCS permits students to:

- 1. Choose electives from a wide range of elective courses offered by the departments of the Institute.
- 2. Undergo additional courses of interest.
- 3. Adopt an inter-disciplinary approach in learning.
- 4. Make the best use of expertise of the available faculty.

2.0 MEDIUM OF INSTRUCTION

The medium of instruction shall be English for all courses, examinations, seminar presentations and project work. The curriculum will comprise courses of study as given in course curriculum in accordance with the prescribed syllabi.

3.0 ELIGIBILITY FOR ADMISSION

The admissions for category A and B seats shall be as per the guidelines of Telangana State Council for Higher Education (TSCHE) in consonance with government reservation policy.

- a) Under Category A: 70% of the seats are filled based on GATE/PGECET ranks.
- b) Under Category B: 30% seats are filled on merit basis as per guidelines of TSCHE.

4.0 UNIQUE COURSE IDENTIFICATION CODE

Every specialization of the M.Tech program will be placed in one of the groups as listed in the Table 1.

S. No	Specialization	Offering Department	Code
1	Structural Engineering	Civil Engineering	ST
2	Electrical Power Systems	Electrical and Electronics Engineering	PS
3	CAD / CAM	Mechanical Engineering	CC
4	Embedded Systems	Electronics and Communication Engineering	ES
5	Computer Science and Engineering	Computer Science and Engineering	CS
6	Aerospace Engineering	Aeronautical Engineering	AE

Table 1	l: Grou	p of Co	ourses

5.0 TYPES OF COURSES

Courses in a program may be of four kinds: Core, Elective, Open and Audit.

5.1 Core Course:

There may be a core course in every semester. This is the course which is to be compulsorily studied by a student as a core requirement to complete the requirement of a program in said discipline of study.

5.2 Elective Course:

Electives provide breadth of experience in respective branch and applications areas. Elective course is a course which can be chosen from a pool of courses. It may be:

- Supportive to the discipline of study
- Providing an expanded scope
- Enabling an exposure to some other discipline/domain
- Nurturing student's proficiency/skill.

There shall be five professional core elective groups out of which students can choose not more than two courses from each group. Overall, students can opt for four professional elective courses which suit their project work in consultation with the faculty advisor/mentor. In addition, one course from each of the two open electives has to be selected. A student may also opt for more elective courses in his/her area of interest.

5.3 Open Elective Course:

An elective may be discipline centric focusing on those courses which add generic proficiency to the students or may be chosen from supportive/general discipline called as "Open Elective".

5.4 Audit Course:

The value added courses are audit courses offered through joint ventures with various organizations providing ample Scope for the students as well as faculty to keep pace with the latest technologies pertaining to their chosen fields of study. A plenty of value added programs will be proposed by the departments one week before the commencement of class work. The students are given the option to choose the courses according to their desires and inclinations as they choose the desired items in a cafeteria. The expertise gained through the value added programs should enable them to face the formidable challenges of the future and also assist them in exploring new opportunities. Its result shall be declared with "Satisfactory" or "Not Satisfactory" performance.

6.0 SEMESTER STRUCTURE

The Institute shall follow semester pattern. An academic year shall consist of two semesters. Each semester shall be of 23 weeks' duration and this period includes time for course work, examination preparation and conduct of examinations. Each main semester shall have a minimum of 90 working days. The duration for each semester shall be a minimum of 17 weeks of instruction. The Academic calendar shall be declared at the beginning of the academic year as shown in Table 2.

	I Spell Instruction Period	Il Instruction Period 9 weeks	
	I Mid Examinations	1 week	21 weeks
	II Spell Instruction Period	8 weeks	
(23 weeks)	II Mid Examinations	1 week	
	Preparation and Practical Examinations	2 weeks	
	Semester End Examinations		2 weeks
Semeste	r Break and Supplementary Exams		2 weeks
	I Spell Instruction Period	9 weeks	
	I Mid Examinations 1 w		21 weeks
SECOND SEMESTER	II Spell Instruction Period 8 week		
(23 weeks)	II Mid Examinations 1 Week		
	Preparation & Practical Examinations 2 weeks		
	Semester End Examinations		2 weeks
Summer	Vacation and Supplementary Exams		4 weeks
	I Spell Instruction Period	9 weeks	
	I Mid Examinations	1 week	19 weeks
THIRD SEMESTER	II Spell Instruction Period	8 weeks	
THIRD SEALES TER	II Mid Examinations 1 week		
	Project Work Phase - I		
	Semester End Examinations		1 week
FOURTH SEMESTER	Project Work Phase - II		18 Weeks

Table 2: Academic Calendar

7.0 PROGRAM DURATION

A student shall be declared eligible for the award of M.Tech degree, if he/she pursues a course of study and completes it successfully in not less than two academic years and not more than four academic years. A student, who fails to fulfill all the academic requirements for the award of the degree within four academic years from the year of his/her admission, shall forfeit his/her seat in M.Tech course.

- a) A student will be eligible for the award of M.Tech degree on securing CGPA \ge 6.0, and shall pass all the mandatory Audit Courses to complete the M.Tech program successfully.
- b) In the event of non-completion of project work and/or non-submission of the project report by the end of the fourth semester, the candidate shall re-register by paying the semester fee for the project. In such a case, the candidate will not be permitted to submit the report earlier than three months and not later than six months from the date of registration.

8.0 CURRICULUM AND COURSE STRUCTURE

The curriculum shall comprise Core Courses, Professional core elective courses, Audit courses, Open elective courses, Laboratory courses, Mini project with seminar, Project work-1 and Project work-2.

Each Theory and Laboratory course carries credits based on the number of hours / week as follows:

- Lecture Hours (Theory): 1 credit per lecture hour per week.
- Laboratory Hours (Practical): 1 credit for 2 practical hours, 2 credits for 3 or 4 practical hours per week.
- **Project Work:** 1 credit for 2 hours of project work per week.

8.1 Credit distribution for courses offered is shown in Table 3.

Table 3: Credit distribution

S. No	Course	Hours	Credits
1	Core Courses		3
2	Professional Core Elective Courses		3
3	Audit Courses	2	0
4	Laboratory Courses	4	2
5	Open Elective Courses	3	3
6	Mini Project with Seminar	2	2
7	Project Work-1 Dissertation	20	10
8	Project Work-2 Dissertation	32	16

8.2 Course wise break-up for the total credits:

Total Theory Courses (12) Core Courses (04)+Professional Core Electives (05) + Open Electives (01)	04@3credits + 05 @ 3 credits + 01@3 credits	30
Total Laboratory Courses (04)	04@2credits	08
Mini Project with Seminar(01)	1@2credit	02
Research Methodology and IPR	1@2 credit	02
Project Work-1	1 @10credit	10
Project Work-2	1 @16credits	16
TOTAL CREDITS		68

9.0 EVALUATION METHODOLOGY

9.1 Theory Course:

Each theory course will be evaluated for a total of 100 marks, out of which 30 marks for Continuous Internal Assessment (CIA) and 70 marks for Semester End Examination (SEE).

9.1.1 Semester End Examination (SEE):

The SEE shall be conducted for 70 marks of 3 hours duration. The syllabus for the theory courses shall be divided into FIVE units and each unit carries equal weightage in terms of marks distribution. The question paper pattern shall be as defined below. Two full questions with 'either' 'or' choice will be drawn from each unit. Each question carries 14 marks. There could be a maximum of three sub divisions in a question.

50 % To test the objectiveness of the concept	
30 %	To test the analytical skill of the concept
20 %	To test the application skill of the concept

The emphasis on the questions is broadly based on the following criteria:

9.1.2 Continuous Internal Assessment (CIA):

For each theory course the CIA shall be conducted by the faculty / teacher handling the course. CIA is conducted for a total of 30 marks, with 20 marks for Continuous Internal Examination (CIE), 05 marks for Assignment and 05 marks for Alternative Assessment Tool (AAT). **Two CIE Tests are Compulsory** and sum of the two tests, along with the scores obtained in the assignment / AAT shall be considered for computing the final CIA of a student in a given course.

The CIE Tests/Assignment /AAT shall be conducted by the course faculty with due approval from the HOD. Advance notification for the conduction of Assignment/AAT is mandatory and the responsibility lies with the concerned course faculty.

	Component	Marks	Total Marks
CIA	Continuous Internal Examination – 1 (Mid-term)	10	
	Continuous Internal Examination – 2 (End-term)	10	20
	Assignment	5	50
	Alternative Assessment Tool (AAT)	5	
SEE	Semester End Examination (SEE)	70	70
	100		

Table 4: Assessment pattern for Theory Courses

Continuous Internal Examination (CIE):

Two CIE exams shall be conducted at the end of the 9th and 17th week of the semester respectively for 10 marks each of 2 hours duration consisting of five descriptive type questions out of which four questions have to be answered. The valuation and verification of answer scripts of CIE exams shall be completed within a week after the conduct of the Examination.

Assignment:

To improve the writing skills in the course an assignment will be evaluated for 05 marks. One assignment has to submit at the end of the CIE2 for the questions provided by the each course coordinator in that semester. Assignments to be handed in as loose paper collection stapled together at the top left corner. The assignment should be presented as a professional report. It must consist of a cover sheet, content page, and should have an introduction, a body, a conclusion or recommendation, and a reference page.

Alternative Assessment Tool (AAT):

In order to encourage innovative methods while delivering a course, the faculty members are encouraged to use the Alternative Assessment Tool (AAT). This AAT enables faculty to design own assessment patterns during the CIA. The AAT enhances the autonomy (freedom and flexibility) of individual faculty and enables them to create innovative pedagogical practices. If properly applied, the AAT converts the classroom into an effective learning center. The AAT may includes, concept videos, course related term paper, technical seminar, term paper, paper presentations conducted by reputed organizations relevant to the course etc.

9.2 Laboratory Course:

Each lab will be evaluated for a total of 100 marks consisting of 30 marks for internal assessment and 70 marks for semester end lab examination. Out of 30 marks of internal assessment, continuous lab assessment will be done for 20 marks for the day to day performance and 10 marks for the final internal lab assessment. The semester end lab examination for 70 marks shall be conducted by two examiners, one of them being a internal examiner and another is external examiner, both nominated by the Principal from the panel of experts recommended by Chairman, BOS.

All the drawing related courses are evaluated in line with lab courses. The distribution shall be 30 marks for internal evaluation (20 marks for day–to–day work, and 10 marks for internal tests) and 70 marks for semester end lab examination. There shall be ONE internal test for 10 marks each in a semester.

9.3 Project work

Normally, the project work should be carried out at Host Institute (Institute of Aeronautical Engineering). However, it can also be carried out in any of the recognized Educational Institutions, National Laboratories, Research Institutions, Industrial Organizations, Service Organizations or Government Organizations with the prior permission from the guide and concerned Head of the Department. A student shall submit the outcome of the project work in the form of a dissertation.

- 9.3.1 The student shall submit the project work synopsis at the end of III semester for Phase-I of project evaluation. The Phase-I of project work shall be evaluated by Project Review Committee (PRC) at the end of the third semester for a maximum of 100 marks. Head of the Department (HOD) shall constitute a PRC comprising of senior faculty of the specialization, Guide and Head of the Department.
- 9.3.2 The first phase of project work is to be carried out in IV semester for Phase –II of Project work. The student will be allowed to appear for final viva voce examination at the end of IV semester only if s/he has submitted s/he project work in the form of paper for presentation/ publication in a conference/journal and produce the proof of acceptance of the paper from the organizers / publishers.
- 9.3.3 The student shall submit the project work in the form of dissertation at least four weeks ahead of the completion of the program. Head of the Department shall constitute an Internal Evaluation Committee (IEC) comprising of the Chairman BOS (PG), HOD and Guide. As per convenes of all meeting for open pre-submission seminar evaluation of the student. If the open pre-submission seminar by a student is not satisfactory, another seminar shall be scheduled within two weeks.

S. No	Project Phases	Mode	Evaluation Committee	Marks
1		Continuous evaluation at the end of III Semester	Guide	30
2	Phase - I	Evaluation at the end of III Semester	Project Review Committee (PRC) comprising of senior faculty of the specialization, guide and HOD.	70
Total (Phase – I) 1				
3	Dhara II	An open pre-submission seminar by the student	The Internal Evaluation Committee (IEC) comprising of the Chairman, BOS (PG), HOD and guide wherein the HOD convenes its meeting.	30
4	rnase - II	End Semester Examination (An open seminar followed by viva- voce)	The External Evaluation Committee (EEC) comprising of External Examiner, HOD and guide wherein the HOD shall be the chairman of the committee.	70
Total (Phase-II)				100

The evaluation of the project work and the marks allotted are as under:

- 9.3.4 As soon as a student submits his project work, Principal shall appoint the External Examiner among the panel of examiners recommended by the Chairman, BOS (PG).
- 9.3.5 The Principal shall schedule the End Semester Examination in project work soon after the completion of the study of program and a student can appear for the same provided s/he has earned successfully all the requisite credits. The student shall produce the dissertation duly certified by the guide and HOD during the Examination.
- 9.3.6 The project reports of M.Tech students who have not completed their course work successfully will be evaluated in that semester itself and the result sent confidentially to the Controller of Examinations. The results of the project work evaluation will be declared by the Controller of Examinations only after the successful completion of the courses by those students.

10.0 ATTENDANCE REQUIREMENTS AND DETENTION POLICY

- 10.1 It is desirable for a candidate to put on 100% attendance in each course. In every course (theory/laboratory), student has to maintain a minimum of 75% attendance including the days of attendance in sports, games, NCC and NSS activities to be eligible for appearing in Semester End Examination of the course.
- 10.2 For cases of medical issues, deficiency of attendance in each course to the extent of 10% may be condoned by the College Academic Committee (CAC) on the recommendation of Head of the Department if his/her attendance is between 75% to 65% in every course, subjected to submission of medical certificate and other needful documents to the concerned department.
- 10.3 The basis for the calculation of the attendance shall be the period prescribed by the institute by its calendar of events. For late admission, attendance is reckoned from the date of admission to the program.
- 10.4 However, in case of a student having less than 65% attendance in any course, s/he shall be detained in the course and in no case such process will be relaxed.
- 10.5 Students whose shortage of attendance is not condoned in any subject are not eligible to write their semester end examination of that courses and their registration shall stand cancelled.
- 10.6 A prescribed fee shall be payable towards Condonation of shortage of attendance.
- 10.7 A candidate shall put in a minimum required attendance at least in three (3) theory courses for getting promoted to next higher class / semester. Otherwise, s/he shall be declared detained and has to repeat semester.
- 10.8 A student shall not be promoted to the next semester unless he satisfies the attendance requirement of the present semester, as applicable. They may seek readmission into that semester when offered next. If any candidate fulfills the attendance requirement in the present semester, s/he shall not be eligible for readmission into the same class.

11.0 CONDUCT OF SEMESTER END EXAMINATIONS AND EVALUATION

- 11.1 Semester end examination shall be conducted by the Controller of Examinations (COE) by inviting Question Papers from the External Examiners.
- 11.2 Question papers may be moderated for the coverage of syllabus, pattern of questions by Semester End Examination Committee chaired by Head of the Department one day before the commencement of semester end examinations.
- 11.3 Internal Examiner shall prepare a detailed scheme of valuation.
- 11.4 The answer papers of semester end examination should be evaluated by the internal examiner immediately after the completion of exam and the award sheet should be submitted to COE in a sealed cover before the same papers are kept for second evaluation by external examiner.

- 11.5 In case of difference is more than 15% of marks, the answer paper shall be revaluated by a third examiner appointed by the Examination Committee and marks awarded by him shall be taken as final.
- 11.6 HOD shall invite 3-9 external examiners to evaluate all the end semester answer scripts on a prescribed date(s). Practical laboratory exams are conducted involving external examiners.
- 11.7 Examination Control Committee shall consolidate the marks awarded by internal and external examiners to award grades.

12.0 SCHEME FOR THE AWARD OF GRADE

- 12.1 A student shall be deemed to have satisfied the minimum academic requirements and earn the credits for each theory course, if s/he secures:
 - i. Not less than 40% marks for each theory course in the semester end examination, and
 - ii. A minimum of 50% marks for each theory course considering both CIA and SEE
- 12.2 A student shall be deemed to have satisfied the minimum academic requirements and earn the credits for each Laboratory / Seminar / Project, if s/he secures
 - i. Not less than 40% marks for each Laboratory / Seminar / Project course in the semester end examination,
 - ii. A minimum of 50% marks for each Laboratory / Mini project with Seminar / Project course considering both internal and semester end examination.
- 12.3 If a candidate fails to secure a pass in a particular course, it is mandatory that s/he shall register and reappear for the examination in that course during the next semester when examination is conducted in that course. It is mandatory that s/he should continue to register and reappear for the examination till s/he secures a pass.

13.0 LETTER GRADES AND GRADE POINTS

13.1 Performances of students in each course are expressed in terms of marks as well as in Letter Grades based on absolute grading system. The UGC recommends a 10 point grading system with the following letter grades as given below:

Range of Marks	Grade Point	Letter Grade (UGC Guidelines)
90% and above $(> 90\% < 100\%)$	10	S (Superior)
$\frac{(\geq 90\%, \geq 100\%)}{\text{Below 90\% but not less than 80\%}}$ $(\geq 80\%, < 90\%)$	9	A+ (Excellent)
Below 80% but not less than 70% $(\geq 70\%, < 80\%)$	8	A (Very Good)
Below 70% but not less than 60% (≥60%, <70%)	7	B+ (Good)
Below 60% but not less than 50% $(\geq 50\%, <60\%)$	6	B (Average)
Below 50% (<50%)	0	F (Fail)
Absent	0	AB (Absent)

- 13.2 A student is deemed to have passed and acquired to correspondent credits in particular course if s/he obtains any one of the following grades: "S", "A+", "A", "B+", "B".
- 13.3 A student obtaining Grade "F" shall be considered Failed and will be required to reappear in the examination.
- 13.4 At the end of each semester, the institute issues grade sheet indicating the SGPA and CGPA of the student. However, grade sheet will not be issued to the student if s/he has any outstanding dues.

14.0 COMPUTATION OF SGPA AND CGPA

The UGC recommends to compute the Semester Grade Point Average (SGPA) and Cumulative Grade Point Average (CGPA). The credit points earned by a student are used for calculating the Semester Grade Point Average (SGPA) and the Cumulative Grade Point Average (CGPA), both of which are important performance indices of the student. SGPA is equal to the sum of all the total points earned by the student in a given semester divided by the number of credits registered by the student in that semester. CGPA gives the sum of all the total points earned in all the previous semesters and the current semester divided by the number of credits. Thus,

$$SGPA = \sum_{i=1}^{n} (C_i G_i) / \sum_{i=1}^{n} C_i$$

Where, C_i is the number of credits of the *i*th course and G_i is the grade point scored by the student in the *i*th course and *n* represent the number of courses in which a student's is registered in the concerned semester.

$$CGP\!\!A = \sum_{j=1}^{m} \left(C_{j} \overset{m}{S}_{j}\right) / \sum_{j=1}^{m} C_{j}$$

Where, S_j is the SGPA of the j^{ih} semester and C_j is the total number of credits upto the semester and *m* represent the number of semesters completed in which a student registered upto the semester. The SGPA and CGPA shall be rounded off to 2 decimal points and reported in the transcripts.

15.0 ILLUSTRATION OF COMPUTATION OF SGPA AND CGPA 15.1 Illustration for SGPA

Course Name	Course Credits	Letter Grade	Grade points	Credit Point (Credit x Grade)
Course 1	4	А	8	4 x 8 = 32
Course 2	4	S	10	4 x 10 = 40
Course 3	4	В	6	4 x 6 = 24
Course 4	3	В	6	3 x 6 = 18
Course 5	3	A+	9	3 x 9 = 27
Course 6	3	В	6	3 x 6 = 18
	21			159

Thus, SGPA = 159 / 21 = 7.57

15.2 Illustration for CGPA

Semester 1	Semester 2	Semester 3	Semester 4
Credits: 24	Credits: 24	Credits: 24	Credits: 24
SGPA: 7	SGPA: 6	SGPA: 6.5	SGPA: 6

Thus,
$$CGPA = \frac{24x7 + 24x6 + 24x6.5 + 24x6 = 6.37}{24x6 + 24x6.5 + 24x6}$$

16.0 REVALUATION

If the examinee is not satisfied with the marks awarded, he/she may apply for revaluation of answer book in prescribed format online within three (3) working days from the date of declaration of result of the examination or issue of the statement of marks, whichever is earlier. The revaluation facility shall be for theory papers only. The revaluation of answer book shall not be permitted in respect of the marks awarded to the scripts of practical examination / project work (including theory part) and in viva voce / oral / comprehensive examinations.

The revaluation will be done by a second independent examiner. The result after revaluation shall be as follows:

- The revaluation marks are considered only if the difference between the original award and award on revaluation is more than equal to 15% of 70 marks (11 marks).
- If the difference between the original award and the award on reevaluation is more than 20% (14 marks), a third evaluator is to be appointed and the average of two nearest awards (in the range of 15%) shall be considered.

17.0 GRADUATION REQUIREMENTS

The following academic requirements shall be met for the award of M .Tech degree.

- 17.1 Student shall register and acquire minimum attendance in all courses and secure 68 credits.
- 17.2 A Student who fails to earn 68 credits as per the specified course catalogue, and as indicated above, within four academic years from the date of commencement of his first year first semester, shall forfeit his/her seat in M. Tech. program and his admission shall stand cancelled.

18.0 AWARD OF DEGREE

After a student has earned the requirements prescribed for the completion of the program and is eligible for the award of M.Tech. Degree, he shall be placed in one of the following three classes based on the CGPA:

Class Awarded	CGPA
First Class with Distinction	≥ 7.75
First Class	6.75≤ CGPA < 7.75
Second Class	$6.00 \le CGPA < 6.75$

A student with final CGPA (at the end of the M.Tech program) < 6.00 shall not be eligible for the Award of Degree.

All the candidates who register for the semester end examination will be issued grade sheet by the Institute. Apart from the semester wise marks memos, the institute will issue the provisional certificate subject to the fulfillment of all the academic requirements.

19.0 TERMINATION FROM THE PROGRAM

The admission of a student to the program may be terminated and the student may be asked to leave the institute in the following circumstances:

- a) The student fails to satisfy the requirements of the program within the maximum period stipulated for that program.
- b) The student fails to satisfy the norms of discipline specified by the institute from time to time.

20.0 WITH-HOLDING OF RESULTS

If the candidate has not paid any dues to the college / if any case of indiscipline / malpractice is pending against him/her, the results of the candidate will be withheld. The issue of the degree is liable to be withheld in such cases.

21.0 DISCIPLINE

Every student is required to observe discipline and decorum both inside and outside the institute and not to indulge in any activity which will tend to bring down the honor of the institute. If a student indulges in malpractice in any of the theory / practical examination, continuous assessment examinations he/she shall be liable for punitive action as prescribed by the Institute from time to time.

22.0 GRIEVANCE REDRESSAL COMMITTEE

The institute shall form a Grievance Redressal Committee for each course in each department with the Course Teacher and the HOD as the members. This Committee shall solve all grievances related to the course under consideration.

23.0 TRANSITORY REGULATIONS

- 23.1 A student who has been detained in any semester of previous regulations for not satisfying the attendance requirements shall be permitted to join in the corresponding semester of this regulation.
- 23.2 Semester End Examination in each course under the regulations that precede immediately these regulations shall be conducted three times after the conduct of last regular examination under those regulations. Thereafter, the failed students, if any, shall take examination in the equivalent papers of these regulations as suggested by the Chairman, BOS concerned.

24.0 REVISION OF REGULATIONS AND CURRICULUM

The Institute from time to time may revise, amend or change the regulations, scheme of examinations and syllabi if found necessary and on approval by the Academic Council and the Governing Body shall come into force and shall be binding on the students, faculty, staff, all authorities of the Institute and others concerned.

FAILURE TO READ AND UNDERSTAND THE REGULATIONS IS NOT AN EXCUSE

SPACE PROPULSION

I Semester: AE								
Course Code	Category	Hours /Week			Credits	Max	kimum	Marks
	Corre	L	Т	Р	С	CIA	SEE	Total
DALCUI	Core	3	-	-	3	30	70	100
ContactClasses:45	Tutorial Classes: Nil	Practical Classes: Nil				To	talClass	ses:45

I. COURSE OVERVIEW:

An aerospace propulsion system is a device that generates forces to push the aerospace vehicles forward. This course discusses about the various Aerospace propulsive devices in micro level, it includes an overview of different types of propulsive system present in aircrafts and rockets such as turbojet, turboprop, turbofan, IC engine, solid propellant, hybrid propellant and liquid propellant engines. Along with that design and analysis will be discussed on the various parameters and components present in aerospace propulsive system.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The basic working principles of different types of air breathing engines.
- II. The design and analysis of IC engines.
- III. The design of different components of gas turbine.
- IV. The design of different components of solid and liquid propellant rockets.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Identify suitable air-breathing engine and operating system for the aircraft based on	Apply
	performance.	
CO 2	Distinguish between the functions and performance parameters of inlets, nozzles,	Apply
	combustors and after burners for choosing desired devices to the aero engines.	
CO 3	Identify the performance parameters for estimating the thrust and specific fuel	Analyze
	consumption of an aircraft engine.	
CO 4	Examine the working procedure of rocket propulsion system and components for	Analyze
	selecting them based on mission profile	
CO 5	Make a use of working principles of solid and hybrid rocket motors for increasing	Apply
	the performances level.	
CO 6	Develop sub-systems and heat transfer systems in liquid propellant rocket for	Analyze
	definitive deep space rocket propulsive design.	

IV. SYLLABUS:

MODULE-I: AIR-BREATHING ENGINES (09)

Classification, operational envelopes; Description and function of gas generator, turbojet, turbofan, turboprop, turboshaft, ramjet, scramjet, turbojet/ramjet combined cycle engine; Engine thrust, takeoff thrust, installed thrust, thrust equation; Engine performance parameters, specific thrust, specific fuel consumption and specific impulse, thermal efficiency, propulsive efficiency, engine overall efficiency and its impact on aircraft range and endurance; Engine cycle analysis and performance analysis for turbojet, turbojet with after burner, turbofan engine, turboprop engine.

MODULE-II: AIRCRAFT ENGINEINLETS, EXHAUST NOZZLES, COMBUSTORS AND AFTERBURNERS (09)

Subsonic inlets: Function, design variables, operating conditions, inlet performance, performance parameters; Supersonic inlets: Compression process, types, construction, losses, performance characteristics; Exhaust

nozzles: primary nozzle, fan nozzle, converging nozzle, converging-diverging nozzle, variable nozzle, and performance maps, thrust reversers and thrust vectoring, Combustors and Afterburners: Geometries, flame stability, ignition and engine starting, adiabatic flame temperature, pressure losses, performance maps, fuel types and properties.

MODULE-III: AXIAL FLOW COMPRESSORS AND TURBINES (09)

Axial flow Compressors: Geometry, definition of flow angles, stage parameters, cascade aerodynamics, aerodynamic forces on compressor blades, rotor and stat or frames of reference, compressor performance maps, velocity polygons or triangles, single stage energy analysis, compressor instability, stall and surge.

Axial Flow Turbines: Geometry, configuration, comparison with axial flow compressors, velocity polygons or triangles, single stage energy analysis, performance maps, thermal limits of blades and vanes, blade cooling, blade and vane materials, blade and vane manufacture.

MODULE-IV: SOLID- PROPELLANT ROCKET MOTORS (09)

Background description: Classification of rocket propulsion systems; Performance of an ideal rocket, rocketthrustequation,totalandspecificimpulse,effectiveexhaustvelocity,rocketefficiencies,characteristicvelocit y, thrust coefficient; Description of solid propellant rocket motor, solid propellant grain configurations, homogeneous propellant, heterogeneous or composite propellant, different grain cross sections, propellant burning rate, combustion of solid propellants, physical and chemical processes, ignition process, combustion instability; Hybrid propellant rockets: Hybrid rocket operation and hybrid rocket characteristics.

MODULE-V: LIQUID PROPELLANT ROCKET ENGINES: PROPELLANTTYPES (09)

Bipropellant,monopropellant,coldgaspropellant,cryogenicpropellant,storablepropellants,gelledpropellant; Propellant Storage, different propellant tank arrangements, propellant feed system-pressure feed, turbo pump feed; Thrust chambers, injectors, combustion chamber, nozzle, starting and ignition, variable thrust; Combustion of liquid propellants: Combustion process, combustion in stability, thrust vector control.

ADVANCED MATHEMATICS IN AEROSPACE ENGINEERING

I Semester: AE								
Course Code	Category	Hours /Week			Credits	Max	Maximum Marks	
	Com	L	Т	Р	С	CIA	SEE	Total
DALCU2	Core	3	0	0	3	30	70	100
ContactClasses:45	Tutorial Classes: Nil	Practical Classes: Nil TotalClasses:45						s:45

I. COURSE OVERVIEW:

The course focuses on more advanced Engineering Mathematics topics which provide the relevant mathematical tools required in the analysis of problems in engineering and scientific professions. The course includes root-finding techniques, Interpolation, and its applications, parabolic equations, Hyperbolic equations, Elliptic equations with applications. The mathematical skills derived from this course form a necessary base for analytical and design concepts encountered in the program.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The numerical methods of interpolation and approximation of solutions for Ordinary Differential Equations.
- II. The mathematical approximation techniques of solutions for Partial Differential Equations.
- III. The concept of Parabolic, Hyperbolic and Elliptic equations.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Calculate the unknown values of given equal and unequal spaced data by using Numerical methods.	Apply
CO 2	Make use of Lagrange's method and method of separation of variables for solving linear and nonlinear partial differential equations.	Apply
CO 3	Interpret the boundary conditions for functions of Parabolic equations by using partial derivatives.	Apply
CO 4	Solve the Parabolic equations by using Crank-Nicholson implicit method.	Apply
CO 5	Compute the numerical solution of the Hyperbolic Equations by using method of characteristics.	Apply
CO 6	Apply the properties of Elliptic Equations for curved boundary analysis by the five- point approximation to Polman's equation.	Apply

IV. COURSE SYLLABUS:

MODULE-I: INTERPOLATION (09)

Interpolation: Finite differences, forward differences, backward differences and central differences; Symbolic relations; Newton's forward interpolation, Newton's backward interpolation; Gauss forward central difference formula, Gauss backward central difference formula; Interpolation of unequal intervals: Lagrange's interpolation.

MODULE-II: PARTIAL DIFFERENTIAL EQUATIONS (09)

Formation of partial differential equations by elimination of arbitrary constants and arbitrary functions, solutions of first order linear equation by Lagrange method; method of separation of variables.

MODULE-III: PARABOLIC EQUATIONS (09)

Introduction to finite difference formula; Parabolic equations: Introduction, explicit finite difference approximation to one dimensional equation, Crank-Nicholson implicit method, derivation for boundary conditions.

MODULE-IV: HYPERBOLIC EQUATIONS (09)

Analytical solution of first order quasi linear equation. Numerical integration along a characteristic lax wenderoff explicit method. CFI condition Wenderoff's implicit approximation, propagation of discontinues numerical solution by the method of characteristics.

MODULE-V: ELLIPTIC EQUATIONS (09)

Introduction, finite differences in polar co-ordinates, formulas for derivative near a curved boundary analysis of the discretization error of the five point approximation to polman's equation over a rectangle.

FATIGUE & FRACTURE

I Semester: AE									
Course Code	Category	Hours /Week			Credits	Maximum Marks			
	Elective	L	Т	Р	С	CIA	SEE	Total	
DALCUS		3	-	-	3	30	70	100	
Contact Classes:45	Tutorial Classes: Nil	Prac	tical	Class	es: Nil	Т	otalClas	ses:45	

I. COURSE OVERVIEW:

Fracture mechanics and fatigue are essential to understanding the structural performance of real-world materials. Fracture mechanics is the study of the complex stress field around the tip of a crack and can be used to determine if an existing crack will propagate or arrest. Fatigue analysis is the study of fracture behavior under repeated cyclic loading. High cycle and low cycles fatigue are used in designing machine members subjected to various fatigue load conditions. Crack growth under fatigue and realistic conditions are analyzed which is used in the industries.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The concept of Endurance limit and methods to increase the endurance limit used in design of machine elements.
- II. The Low cycle and High cycle Fatigue used in design of machine members.
- III. The behavior of materials under static load and fatigue loads.
- IV. The Strength of a cracked bodies under fatigue and static load conditions.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Apply the concept of stress and number of cyclic loadings on a given specimen for deterring the endurance limit.	Apply
CO 2	Analyze the behavior of a specimen under High cycle and Low cycle fatigues for design against fatigue failure	Analyze
CO 3	Apply the mathematical principles to High cycle and Low cycle fatigues for determining the failure loads	Analyze
CO 4	Analyze the influence of crack growth under fatigue loads and surface roughness for designing the member to withstand the crack	Analyze
CO 5	Analyze the various methods involved in crack detections techniques for identifying the surface cracks.	Analyze
CO 6	Illustrate the various methods involved in fatigue testing for determining the Endurance limit.	Apply

IV. COURSE SYLLABUS:

MODULE-I: FATIGUE OF STRUCTURES (08)

S.N.curves,Endurancelimit,Effectofmeanstress,Goodman,GerberandSoderbergrelationsanddiagrams,Notches and stress concentrations, Neuber's stress concentration factors, plastic stress concentration factors, Notched S-N curves.

MODULE-II: STATISTICAL ASPECTS OF FATIGUE BEHAVIOUR (10)

Low cycle and high cycle fatigue, Coffin-Manson "relation, Transition life, Cyclic Strain hardening and softening Analysis of load histories, Cycle counting techniques, Cumulative damage, Miner's theory, other theories.

MODULE-III: PHYSICAL ASPECTS OF FATIGUE (10)

Phase in fatigue life, Crack initiation, Crack growth, Final fracture

Dislocations, Fatigue fracture surfaces.

MODULE-IV: FRACTURE MECHANICS (09)

Strength of cracked bodies, potential energy and surface energy, Griffith's theory, Irwin, Orwin extension of Griffith's theory to ductile materials, Stress analysis of cracked bodies, effect of thickness on fracture toughness, stress intensity factors for typical geometries.

MODULE-V: FATIGUE DESIGN AND TESTING (08)

Safe life and fail safe design philosophies, importance of fracture mechanics in aerospace structure, application to composite materials and structures.

V. TEXT BOOKS:

- 1. D.Brock, "Elementary Engineering Fracture Mechanics", Noordhoff International Publishing Co.,London, 1994.

AERO ELASTICITY

I Semester: AE								
Course Code	Category	Hours /Week			Credits	Maximum Marks		
		L	Т	Р	С	CIA	SEE	Total
DALC04	Liective	3	-	-	3	30	70	100
Contact Classes:45	Tutorial Classes: Nil	Practical Classes: Nil				Tota	l Classe	es:45

I. COURSE OVERVIEW:

Aeroelasticity is a study of behavior of aircraft structural components while submerged in a fluid. In simpler terms, it deals with the comprehension of elastic, aerodynamic and inertial forces on a body due to fluid flow around it. It is a combination of three distinct fields of aeronautical engineering *i.e.* aerodynamics, stability and control, and solid mechanics. This course, deals with static aeroelasticity as well as dynamic aero elasticity. Each category of aero elasticity will have specific importance and they shall take roots from one of the aforementioned three domains. Students shall go through the basics of aero elasticity till dynamic phenomenon such as flutter.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. Outline importance of aero elasticity in flight vehicle design and classify static and dynamic aeroelastic problems.
- II. The structural dynamic and steady and unsteady aerodynamics aspects of airframe and its components and their role in aero elasticity.
- III. To construct theoretical basis for the solution of static aeroelastic problems an estimate loads and other critical speeds.
- IV. To construct theoretical basis for the solution of flutter problems and estimate of flutter speeds.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Illustrate the S-N diagram for estimating the endurance limit (failure point) under mean and alternating stresses.	Understand
CO 2	Apply the fracture mechanics theories for materials (Ductile, Brittle) subjected to crack(s) for determining the conditions for failure.	Apply
CO 3	Illustrate the influence of material thickness, fracture toughness, and stress intensity factors for cracked bodies of various geometries for stress and strain patterns.	Understand
CO 4	Identify various types of composite materials used for constructing modern aircraft components and structures to reduce the weight.	Apply
CO 5	Construct the shear stress distribution in closed section beams subjected to torsion for minimizing stress intensity.	Apply
CO 6	Apply the theory of Moment Couple for better load resistance in aircraft applications.	Apply

IV. COURSE SYLLABUS:

MODULE-I: AEROELASTIC PHENOMENA (08)

Stability versus response problems; The aeroelastic triangle of forces; Aero elasticity in Aircraft Design; Prevention of aeroelastic in stabilities. Influence and stiffness coefficients. Coupled oscillations.

MODULE-II: DIVERGENCE OF A LIFTING SURFACE (10)

Simple two-dimensional idealizations; Strip theory, Integral equation of the second kind Exact solutions for

simple rectangular wings, Semirigid "assumption and approximate solutions; Generalized coordinates, successive approximations, numerical approximations using matrix equations.

MODULE-III: STEADY STATE AEROLASTIC PROBLEMS (08)

Loss and reversal failer on control, critical ailer on reversal speed, ailer on efficiency, semi rigid theory and successive approximations, lift distribution, rigid and elastic wings.

Tail efficiency, effect of elastic deformation on static longitudinal stability.

MODULE-IV: FLUTTER PHENOMENON (10)

Non-dimensional parameters, stiffness criteria, dynamic mass balancing, dimensional similarity; Flutter analysis, two dimensional thin airfoils in steady incompressible flow, quasi steady aerodynamic derivatives; Galerkin method for critical flutter speed, stability of disturbed motion, solution of the flutter determinant, methods of determining the critical flutter speeds, flutter prevention and control.

MODULE-V: EXAMPLES OF AERO ELASTIC PROBLEMS (09)

Gall oping of transmission lines and Flow induced vibrations of transmission lines, tall slender structures and suspension bridges.

ADVANCED COMPUTATIONAL AERODYNAMICS

I Semester: AE								
Course Code	Category	Hours /Week			Credits	Maximum Marks		arks
DAEC05		L	Т	Р	С	CIA	SEE	Total
DALCUS	Liecuve	3	-	-	3	30	70	100
ContactClasses:45	Tutorial Classes: Nil	Practical Classes: Nil				Total Classes:45		

I. COURSE OVERVIEW:

This course deals with the theory behind the commercially available computational fluid dynamic softwares and numerical methods for theory of the fluid flows. The primary focus of this course is on most used, progressive numerical techniques and time dependent methods used to solve the partial differential equations. The students will learn about the boundary layer equations and its transformations. Generation of the grids and its types, various boundary conditions in a fluid flow at different conditions discussed. Philosophy of methods of characteristics for solving the supersonic flow is appreciated. Quintessential method for solving flow around an airfoil that is Panel Methods is addressed.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. Advanced techniques in the numerical solution of aerodynamic problems, issues that arise in the solution of such equations in CFD.
- II. The formation of boundary layer equations and the boundary conditions to solve the aerodynamics problems.
- III. Different methods evolved in analyzing numerical stability of solutions and evaluate the parameters over which the stability depends and their range of values.
- IV. Basic formulation of panel methods and consideration to establish the numerical solutions.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Apply the flux approach, flux vector splitting, upwind reconstruction- evolution methods for solving the compressible flow problems using Euler's equations.	Apply
CO 2	Make use of the explicit, implicit, time split methods and approximate factorization schemes for obtaining the stabilized numerical solution of subsonic and supersonic nozzle flows.	Understand
CO 3	Develop the boundary layer transformation equations for steady external flows on airfoil, wings and aircraft using finite difference method.	Apply
CO 4	Analyze the structured, unstructured grids and dummy cells using physical boundary conditions for attaining the accurate results of fluid flow problems.	Apply
CO 5	Identify the characteristic lines and compatibility equations for designing the supersonic nozzle having shock free and isentropic flow.	Apply
CO 6	Utilize the effects of compressibility and viscosity on thin airfoil for establishing the numerical solution in aerodynamic problems.	Analyze

IV. SYLLABUS:

MODULE-I: NUMERICAL SOLUTIONS (10)

Euler equations: Flux approach, Lax-Wendroff method, basic principles of upwind schemes, flux vector splitting, Steger Warming flux vector splitting, VanLeer flux vector splitting, Upwind reconstruction, evolution, Godunov''s first order upwind method, Roe's first order upwind method.

MODULE-II: TIME DEPENDENT METHODS (10)

Stability of solution, explicit methods, FTFS, FTCS, FTBS, Leapfrog method, Lax method. Implicit methods: 25 Page

Euler"s FTCS, Crank Nicols on method, description of Lax-Wendroff scheme, McCormack two step predictor corrector method, description of time split methods, approximate factorization schemes.

MODULE-III: BOUNDARY CONDITIONS (09)

Boundary Layer Equations: Setting up the boundary layer equations, flat plate boundary layer solution, boundary layer transformations, explicit and implicit discretization, solution of the implicit difference equations, integration of the continuity equation, boundary layer edge and wall shear stress, Keller-box scheme.

Concept of dummy cells, solid wall in viscid flow, viscous flow, farfield concept to characteristic variables, modifications for lifting bodies inlet outlet boundary, injection boundary, symmetry plane, coordinate cut, periodic boundaries, interface between grid blocks, flow gradients at boundaries of unstructured grids.

MODULE-IV: METHOD OF CHARACTERISTICS (08)

Philosophy of method of characteristics, determination of characteristic lines, two dimensional irrotational flow, determination of compatibility equations, unit processes, supersonic nozzle design by the method of characteristics, supersonic wind tunnel nozzle, minimum length nozzles, domain of dependence and range of influence.

MODULE-V: PANEL METHODS (08)

Basic formulation, boundary conditions, physical considerations, reduction of a problem to a set of linear algebraic equations, aerodynamic loads, preliminary considerations prior to establishing numerical solution, steps toward constructing a numerical solution, solution of thin airfoil with lumped vortex filament, accounting for effects of compressibility and viscosity.

AUTOMATIC CONTROL OF AIRCRAFT

I Semester: AE									
Course Code	Category	Hours /Week		Credits	Maximum Marks		1		
	Flootivo	L	Т	Р	С	CIA	SEE	Total	
BAECUO	Liective	3	-	-	3	30	70	100	
ContactClasses:45	Tutorial Classes: Nil	Practical Classes: Nil			ses: Nil	Total C	lasses: 45		

I. COURSE OVERVIEW:

This course is intended to study the automatic control of the flight vehicles through the air or in outer space. It concerns the forces and moments, that are acting on the air- vehicles to determine the position and attitude with respect to the time. It also develops as an engineering science throughout succeeding generations of aeronautical engineers to support increasing demands of autonomous aircraft navigation and control. It has a major role to play in the design of modern aircraft to ensure efficient, comfortable and safe flight. Modern aircraft control is ensured through automatic control systems known as autopilot in association with Fly-by- Wire, to increase safety, facilitate the pilot's task easier and improve flight qualities.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The fundamental theory of guidance and control systems of aircraft and also different augmentation systems used for aircraft and space vehicles
- II. The different autopilot systems, flight path stabilization and Automatic Flare Control systems used for flight vehicles.
- III. The modern automatic control systems like Fly-by-Wire, Fly-by-Optics systems and different flight control laws design using different algorithms.
- IV. The advanced computational tools to design of navigation and guidance systems for automation of aircrafts, missiles, helicopters and space launch vehicles.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Explain the historical perspective of guidance and control of the aircraft for assessing	Understand
	the rate of progress of these systems.	
CO 2	Discuss the different types of control augmentation systems used in aircraft for	Apply
	estimating the control performance of the flight vehicle.	
CO 3	Examine the automatic gain schedule concept for airplane control by plotting the	Apply
	required curve for obtaining desired automatic control of the flight vehicles.	
CO 4	Demonstrate the acceleration control and automated flare control system using the	Apply
	back step algorithm for obtaining the state of automated control.	
CO 5	Applythe mathematical model for the damping of the Dutch roll by using methods	Apply
	of coordination for the different types of air vehicles.	
CO 6	Analyze the principles of automated control on lateral beam guidance system	Analyze
	(LBGS) for aircraft's different flight modes.	

IV. COURSE SYLLABUS:

MODULE-I: INTRODUCTION (05)

Introduction to Guidance and control: Definition, historical background.

MODULE-II: AUGMENTATION SYSTEMS (07)

Need for automatic flight control systems, stability augmentation systems, control augmentation systems, gain scheduling concepts.

MODULE-III: LONGITUDINAL AUTOPILOT (10)

Displacement Autopilot: Pitch orientation control system, acceleration control system, glide slope coupler and automatic flare control.

Flight path stabilization, longitudinal control law design using back stepping algorithm.

MODULE-IV: LATERAL AUTOPILOT (11)

Damping of the Dutch roll, methods of obtaining coordination, yaw orientation control system, turn compensation, automatic lateral beam guidance.

MODULE-V: FLY BY WIRE FLIGHT CONTROL (12)

Introduction to Fly-by-wire flight control systems, fly-by-wire flight control features and advantages, control laws, redundancy and failure survival, digital implementation, fly-by-light flight control.

UNMANNED AERIAL VEHICLES

I Semester: AE										
Course Code	Category	Но	urs /V	Veek	Credits	Maximum Marks				
BAEC07	Elective	L	Т	Р	С	CIA	SEE	Total		
		3	-	-	3	30	70	100		
ContactClasses:45	Tutorial Classe	es: Nil	Practical Classes: Nil		lasses: Nil	Total Classes: 45				

I. COURSE OVERVIEW:

The course focuses on fundamentals related to powered, aerial vehicle systems that do not carry a human operator, including the terminology related to unmanned air vehicle systems (UAS), subsystems, the basic design of UAS for stealth and reliability, and also provides insight into different types of airframes and powerplants. It imparts knowledge about navigation, communications, control, and stability of UAVs. The course is aimed to obtain knowledge also in certification, testing and deployment, and future applications.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The major subsystems and the fundamental design concepts of Unmanned Air Vehicle Systems (UAS).
- II. The important design concepts like reliability, stealth, and maintenance of UAS.
- III. The various communication media, navigation systems, control, and stability of UAVs.
- IV. The development, testing, certification, and deployment of UAS.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Apply the concept of major sub-systems, and performance Characteristics for designing the UAV/ UAS.	Apply
CO 2	Identify the appropriate communication, navigation and guidance systems for maneuvering of Unmanned Air Vehicles.	Apply
CO 3	Categorize the techniques of the stability and control of UAV for desired maneuvering of Unmanned Air Vehicles.	Understand
CO 4	Analyze the design and development of Unmanned Aircraft System for stealth, reliability and Manufacturing.	Apply
CO 5	Identify the appropriate testing and certification process for the development of UAS to meet the international standard.	Apply
CO 6	Make use of the concepts of network-centric operations for the deployment of UAS in field operations.	Analyze

IV. COURSE SYLLABUS:

MODULE-I: INTRODUCTION TO UNMANNED AIRCRAFT SYSTEMS (10)

Applications of UAS, categories of UAV systems, roles of unmanned aircraft, composition of UAV system.

MODULE-II: DESIGN OF UAV SYSTEMS-I (08)

Introduction to design and selection of the systems-conceptual phase, preliminary design, detailed design; Aerodynamics and airframe configurations-Lift-induced Drag, Parasitic Drag, Rotary-wing Aerodynamics, Response to Air Turbulence, Airframe Configurations; Medium-range, Tactical Aircraft, Characteristics of AircraftTypes-Long-endurance,Long-rangeRoleAircraft,Medium-range,TacticalAircraft,Close-range/Battle
field Aircraft, MUAV Types, MAV and NAV Types, UCAV, Novel Hybrid Aircraft Configurations, Aspects of Airframe Design: Scale Effects, Packaging Density, Aerodynamics, Structures and Mechanisms, Selection of power- plants, Modular Construction, Ancillary Equipment, Design for Stealth: Acoustic Signature, Visual Signature, Thermal Signature, Radio/Radar Signature, Payload Types: Non-dispensable and dispensable payloads.

MODULE-III: DESIGN OF UAV SYSTEMS-II (09)

Communications-Communication Media, Radio Communication, Mid-air Collision(MAC) Avoidance, Communications Data Rate and Bandwidth Usage, Antenna Type; Control and Stability: HTOL Aircraft, Convertible Rotor Aircraft, Payload Control, Sensors, Autonomy; Navigation: NAVSTAR Global Positioning System (GPS), TACAN, LORAN C, Inertial Navigation, Radio Tracking, Way-point Navigation; Launch and Recovery.

Design for Reliability: Determination of the Required Level of Reliability, Achieving Reliability, Reliability Data Presentation, Multiplexed Systems, Reliability by Design, Design for Ease of Maintenance; Design for Manufacture and Development.

MODULE-IV: THE DEVELOPMENT OF UAV SYSTEMS (10)

System Development and Certification-System Development, Certification, Establishing Reliability; System Ground Testing: UAV Component Testing, UAV Sub- assembly and Sub-system Testing, Testing Complete UAV, Control Station Testing, Catapult Launch System Tests, Documentation; System In-flight Testing: Test Sites, Preparation for In-flight Testing, In-flight Testing, System certification.

MODULE-V: DEPLOYMENT AND FUTURE OF UAV SYSTEMS (08)

Operational trials and full certification; UAV System Deployment- Network-centric Operations (NCO), Teaming with Manned and Other Unmanned System; Naval, arm and airforce roles, civilian, paramilitary and commercial roles.

DESIGN AND ANALYSIS OF COMPOSITE STRUCTURES

I Semester: AE									
Course Code	Category	Hours /Week			Credits	Maximum Marks			
BAEC08	Elective	L	Т	Р	С	CIA	SEE	Total	
		3	-	-	3	30	70	100	
Contact Classes:45	Tutorial Classes: Nil	Practical Classes: Nil				TotalClasses:45			
I. COURSE OVERVIEW:									

The course focuses on properties of constituent materials and composite laminates, and also provides insight into different analysis approaches of composite materials. It imparts knowledge about different theories of analysis of laminated beams and plates. The course is aimed to obtain knowledge also in different failure theories and concepts of composite materials.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The contribution of constituent materials to the mechanical properties of composite laminates.
- II. The various analysis approaches of composite plates and beams.
- III. The different failure theories of composite materials.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Apply the knowledge of properties of constituent materials to analyse the composite materials	Apply
CO 2	Develop stress-strain relations of isotropic, orthotropic, and anisotropic composite materials to design the composite laminates	Apply
CO 3	Apply the knowledge of classical lamination theory for analysing various composite materials	Apply
CO 4	Explain the mechanical behavior of layered composites compared to isotropic materials	Understand
CO 5	Develop relationships of mechanical loads applied to a laminate to analyze the strains and stresses in each lamina	Apply
CO 6	Identify the failure of individual lamina in a laminate to analyze the failure criteria of composite laminates	Apply

IV. SYLLABUS:

MODULE-I: PROPERTIES OF CONSTITUENT MATERIALS & COMPOSITE LAMINATES (09)

Introduction to laminated composite plates- mechanical properties of constituent materials such as matrices and filaments of different types. Netting analysis of composite materials, determination of properties of laminates with fibers and matrices.

MODULE-II: ELASTIC PROPERTIES (09)

Stress-strain relations of isotropic, ortho tropic and anisotropic materials, transformation of material properties for arbitrary orientation of fibers.

MODULE-III: METHODS OF ANALYSIS-I & METHODS OF ANALYSIS -II (09)

Mechanics of materials approach to determine Young's modulus, shear modulus and Poisson's ratio. Brief mention of elasticity approach and macro mechanics of laminates.

Anisotropic elasticity, stress –strain relations in material coordinates - Transformation of geometric axes, strength concepts, biaxial strength theories, maximum stress and maximum strain.

MODULE-IV: ANALYSIS OF LAMINATED BEAMS AND PLATES (09)

Classical plate theory, Classical lamination theory – Special cases of single layer, symmetric, anti-symmetric & unsymmetric composites with cross ply, angle ply layup. Deflection analysis of laminated plates, Analysis of laminated beams and plates.

MODULE-V: SHEAR DEFORMATION ANALYSIS& BUCKLING ANALYSIS (09)

Shear deformation theories for composite laminated beams, plates- first, second and third order theories. Nth order theory. Buckling analysis of laminated composite plates with different orientation of fibers, Tsai-wu criteria and Tsai– Hill Criteria.

EXPERIMENTAL AERODYAMICS

I Semester: AE								
Course Code	Category	Hours /Week			Credits	Maximum Marks		
BAEC09	Elective	L	Т	Р	С	CIA	SEE	Total
		3	-	-	3	30	70	100
Contact Classes:45	Tutorial Classes: Nil	Р	ractica	l Classe	s: Nil	Total Classes:45		

I. COURSE OVERVIEW:

The experimental aerodynamics is the first course for graduate and undergraduate students in Aerospace Engineering. The testing methodology employed in low and high-speed aerodynamics is a new techniques through which the students will learn various types of wind tunnels, tools and techniques. The experimental aerodynamics will be helpful to industrial aerodynamics study in various engineering branches like, environmental engineering, civil engineering, Automobile engineering etc., so that students get exposure to the various aspects of the subject related issues to measuring techniques, wind tunnel design, method and practical applications used. This subject will help the students to develop the tool by using multidisciplinary techniques. A number of problems/examples will be cited to enhance the understanding of the subject matter and besides, many unsolved problems will be provided with answers to further test the student's learning.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The different components of wind tunnel and their function.
- II. The pressure distribution on airfoil, sphere, cylinder other aerodynamic surfaces and bluff body.
- III. The experiment to measure forces on a model force balance.
- IV. Experiment to determine boundary layer.
- V. Different flow of visualization techniques.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

		1
CO 1	Explain the need of wind tunnel and its measuring techniques for analysis of model using geometric similarity, kinematic similarity and dynamic similarity.	Understand
CO 2	Identify the principal components of low-speed wind tunnel and their functions for determining loss coefficients and constraints.	Apply
CO 3	Demonstrate low speed wind tunnel balances, mechanical and Strain gauge types, null displacement methods and strain method and etc for load measurement using wind tunnel balance.	Apply
CO 4	Identify the principles of probes and transducers used in pressure, velocity & temperature measurements techniques.	Apply
CO 5	Identify the necessity of streamlines, streak lines, path lines, time lines, tufts, china clay, oil film, and smoke and hydrogen bubble for flow visualization of wind in wind tunnel.	Apply
CO 6	Identify the applications of wind tunnels for the analysis of load, pressure, velocity and temperature measurements using flow visualization for the analysis of aerodynamic problems in automobile and aerospace industries.	Apply

IV. COURSE SYLLABUS:

MODULE-I: AERODYNAMIC EXPERIMENTS- HISTORY, MODEL TESTING AND WIND TUNNELS -TYPES, APPLICATION (08)

Forms of aerodynamic experiments: Observation, measurement, objectives, history, means; Model testing-wind tunnel, principles, scaling laws, scale parameters, significance; Wind tunnels, low speed types, description; High

speed tunnels, transonic, supersonic, hypersonic, shock tubes, special tunnels, low turbulence, high environmental, automobile, function, distinctive features, application; Major wind tunnel facilities - description, details.

MODULE-II: LOW SPEED WIND TUNNELS - CONSTRUCTION, COMPONENTS, PERFORMANCE & WIND TUNNEL CORRECTIONS (10)

Low speed wind tunnel, principal components, working section, diffuser, corners, turning vanes, fan, straighteners, honey combs, screens, contraction cone, fan, motor- function, description, design requirements, constraints, construction, performance-loss coefficients; Wind tunnel performance, flow quality, power losses; Wind tunnel corrections; Sources of in accuracies, buoyancy, solid blockage, wake blockage, streamline curvature- causes, estimation, and correction; Total correction on airspeed, dynamic pressure, zero lift drag.

MODULE-III: LOAD MEASUREMENTS-WIND TUNNEL BALANCES AND FLOW MEASUREMENTS - INSTRUMENTATION (10)

Load measurements, wind tunnel balances, types, description, application; Steady and unsteady pressure measurement and various types of pressure probes and transducers, errors in pressure measurements. Measurement of temperature using thermocouples, resistance thermometers, temperature sensitive paints and liquid crystals; Measurement of airspeed, flow direction, boundary layer profile using Pitot statictubes,5 hole probes, total head rake-function, working principle, types, details of design and construction, use.

MODULE-IV: FLOW VISUALISATION TECHNIQUES (09)

Flow visualization, need, types, tufts, china clay, oil film, smoke, working principle, description, setting up, operation, observation, recording, interpretation of imagery, relative merits, applications; High speed flows, optical methods, shadow graphy, Schleiren, interferometry.

MODULE-V: MEASUREMENT OF VELOCITY- HOTWIRE ANEMOMETRY, LASER DOPPLER ANEMOMETRY, PARTICLE IMAGE VELOCIMETRY- OVERVIEW (08)

Hot wire anemometry, laser Doppler anemometry, particle image velocimetry, working principles, description of equipment, experimental setup, settings, calibration, measurement, data processing, applications.

CONTINUUM MECHANICS

I Semester: AE									
Course Code	Category	Hours /Week			Credits	Maximum Marks			
BAEC10	Elective	L	Т	Р	С	CIA	SEE	Total	
		3	-	-	3	30	70	100	
ContactClasses:45	Tutorial Classes: Nil	Practical Classes: Nil				TotalClasses:45			

I. COURSE OVERVIEW:

The major emphasis of this course is to model the mechanical behavior of materials as a continuous mass rather than as discrete particles. Mathematical concepts in higher dimensions are introduced to understand further topics. Concept of continuum applied to solid mechanics, fluid mechanics to make a clear understanding of system behavior. Nonlinear systems are linearized to understand the stability behavior of systems.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. Analyze the infinite dimensional problem in a finite dimensional space with an error control.
- II. Apply the concept of Cauchy Stress Tensor and Cauchy's Formula, Transformation of Stress Components and Principal Stresses on solid domains.
- III. Analyze the principles of Navier equations to a fluid domain.
- IV. Apply the various mathematical methods to heat transfer related domain.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Apply the concept of vector calculus and linear algebra for solving engineering related problems in a finite dimensional space.	Apply
CO 2	Utilize the Cauchy Stress Tensor and Cauchy's Formula, Transformation of Stress Components and Principal Stresses for determining stresses and strains on solids.	Apply
CO 3	Apply the concept of Reynolds Transport Theorem, Conservation of Momenta, Principle of Conservation of Linear Momentum for determining the pressure and velocity vectors in fluid domains.	Apply
CO 4	Apply the concept of Hooks law, material symmetry to Monoclinic Materials, Orthotropic Materials, and Isotropic Materials, for determining the stresses and strains.	Apply
CO 5	Apply the Navier Equations, Beltrami-Michell Equations with various boundary conditions, for obtaining the velocity and pressure distribution on a given geometry.	Apply
CO 6	Apply the various mathematical methods like Laplace transforms to Spring Mass Damper system subjected to various inputs forcing functions, for determining the displacement and velocity.	Apply

IV. SYLLABUS:

MODULE-I: INTRODUCTION, VECTORS AND TENSORS (08)

Background and Overview, Vector Algebra - Definition of a Vector, Scalar and Vector Products, Plane Area as a Vector, Components of a Vector, Summation Convention, Transformation Law for Different Bases; Theory of Matrices - Definition, Matrix Addition and Multiplication of a Matrix by a Scalar, Matrix Transpose and Symmetric Matrix, Matrix Multiplication, Inverse and Determinant of a Matrix; Vector Calculus - Derivative of a Scalar Function of a Vector, The del Operator, Divergence and Curl of a Vector, Cylindrical and Spherical Coordinate Systems, Gradient, Divergence and Curl Theorems; Tensors Dyads and Polyads, Nonion Form of a Dyadic, Transformation of Components of a Dyadic, Tensor Calculus, Eigenvalues and Eigenvectors of Tensors.

MODULE-II: KINEMATICS OF CONTINUA (10)

Introduction, Description of Motion- Configurations of a Continuous Medium, Material Description, Spatial Description, Displacement Field; Analysis of Deformation- Deformation gradient tensors, Isochoric, Homogeneous and Inhomogeneous Deformations, Change of volume and surface; Strain MeasuresCauchy-Green deformation tensors, Green Strain tensor, Physical Interpretation of the Strain Components, Cauchy and Euler Strain Tensors, Principal Strains; Infinitesimal Strain Tensor and Rotation Tensor- Infinitesimal Strain Tensor, Physical Interpretation of Infinitesimal Strain Tensor Components, Infinitesimal Rotation Tensor, Infinitesimal Strains in Cylindrical and Spherical Coordinate Systems; Rate of Deformation and Vorticity Tensors- Definitions, Relationship between D and E, Polar Decomposition Theorem, Compatibility Equations, Change of Observer- Material Frame Indifference.

MODULE-III: STRESS MEASURES, CONSERVATION OF MASS, MOMENTA AND ENERGY (10) Introduction, Cauchy Stress Tensor and Cauchy's Formula, Transformation of Stress Components and Principal Stresses- Transformation of Stress Components, Principal Stresses and Principal Planes, Maximum Shear Stress. Other Stress Measures - Preliminary Comments, First Piola- Kirchhoff Stress Tensor, Second Piola- Kirchhoff Stress Tensor, Equations of Equilibrium.

Introduction, Conservation of Mass - Preliminary Discussion, Material Time Derivative, Continuity Equation in Spatial Description, Continuity Equation in Material Description, Reynolds Transport Theorem. Conservation of Momenta - Principle of Conservation of Linear Momentum, Equation of Motion in Cylindrical and Spherical Coordinates, Principle of Conservation of Angular Momentum, Thermodynamic Principles -Introduction, The First Law of Thermodynamics: Energy Equation, Special Cases of Energy Equation, Energy Equation for One-Dimensional Flows, The Second Law of Thermodynamics.

MODULE-IV: CONSTITUTIVE EQUATIONS AND LINEARIZED ELASTICITY (09)

Introduction, Elastic Solids - Generalized Hooke's Law, Material Symmetry, Monoclinic Materials, Orthotropic Materials, Isotropic Materials, Transformation of Stress and Strain Components, Nonlinear Elastic Constitutive Relations, Constitutive Equations for Fluids - Ideal Fluids, Viscous Incompressible Fluids, Non-Newtonian Fluids, Heat Transfer - General Introduction, Fourier's Heat Conduction Law, Newton's Law of Cooling, Stefan-Boltzmann Law, Electromagnetics - Maxwell's Equation, Constitutive Relations. Governing Equations, The Navier Equations, The Beltrami-Michell Equations, Types of Boundary Value Problems and Superposition Principle. Clapeyron's theorem and Reciprocity Relations - Clapeyron's theorem, Betti's Reciprocity Relations, Maxwell's Reciprocity Relation, Solution Methods, Types of Solution Methods, Example: Rotating Thick Walled Cylinder; Two-Dimensional Problems, Airy Stress Function, End Effects: Saint-Venant's Principle, Torsion of Noncircular Cylinders. Principle of Minimum Total Potential Energy - Total Potential Energy Principle, Derivation of Navier's Equations, Castiglian's Theorem. Hamilton's Principle-Hamilton's Principle for a Rigid Body, Hamilton's Principle for a Continuum.

MODULE-V: FLUID MECHANICS AND HEAT TRANSFER, LINEAR VISCOELASTICITY (08)

Preliminary Comments- Initial Value Problem, the Unit Impulse, and the Unit Step Function, The Laplace Transform Method, Spring and Dashpot Models - Creep Compliance and Relaxation Modulus, Maxwell Element, Kelvin-Voigt Element, Three-Element Models, Four-Element Models, Integral Constitutive Equations, Hereditary Integrals, Hereditary Integrals for Deviatoric Components, The Correspondence Principle, Elastic and Viscoelastic Analogies.

ADVANCED COMPUTATIONAL AERODYNAMICS LABORATORY

I Semester: AE								
Course Code	Category	Но	urs /W	eek	Credits	Maximum Marks		
BAEC11	Core	L	Т	Р	С	CIA	SEE	Total
		-	-	4	2	30	70	100
Contact Classes: Nil	Tutorial Classes: Nil	Practical Classes:36			es:36	Total Classes:36		

I. COURSE OVERVIEW:

The major emphasis of this course is to solve a complex geometrical structures under a given loads, these methods does not have analytical solutions. Software's like ANSYS and NASTRAN is utilized to interpret results for complex geometries. Modeling of crack and composite structures help the students to solve realistic problems which are common in industries. Structural analysis on aircraft structures and Rocket components are delt to obtain the solution for bending and torsion under the applied aerodynamic loads.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The utilization of ANSYS and NASTRAN software to obtain the solution for complex geometrical structures.
- II. The mathematical methods involved in structural mechanics along with its strengths and weakness.
- III. Modeling a structural crack in ANSYS and NASTRAN and determine its failure loads.
- IV. Modeling a complex composite structure in ANSYS and NASTRAN and determine the stresses and strains.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Apply the philosophy behind the computational fluid dynamics for recognizing flow properties in solving fluids and heat transfer problems.	Apply
CO 2	Select the structured, unstructured mesh and multi-blocking strategy in basic, complex geometries and flow domains for computing aerodynamic characteristics.	Apply
CO 3	Identify the appropriate physical boundary conditions for attaining the precise results of fluid flow over a body.	Understand
CO 4	Choose the suitable numerical modeling and schemes for computational simulations of aerodynamics and thermo-fluid problems using ANSYS.	Understand
CO 5	Analyze the numerical solution of fluid flow problems using flow visualization Software's for recognizing the flow physics in and around the supersonic intake and free jet.	Analyze
CO 6	Develop the numerical code for one dimensional heat and wave equation using explicit finite difference method.	Apply

IV. LIST OF EXPERIMENTS:

Week-1: INTRODUCTION

Introduction to computational aerodynamics, the major theories, approaches and methodologies used in computational aerodynamics. Applications of computational aerodynamics for classical aerodynamics problems.

Week-2: INTRODUCTION TO ANSYS CFX

Introduction to gambit, geometry creation, suitable meshing types and boundary conditions.

Week-3: INTRODUCTION TO ANSYS FLUENT

Introduction to fluent, boundary conditions, solve conditions and post processing results.

Week-4: FLOW THROUGH NOZZLE

Flow Through Nozzle

Week-5: FLOW THROUGH SUPER SONIC INTAKE

Flow Through Supersonic Intake

Week-6: SUPERSONIC FREEJET Flow over a Supersonic Free Jet

Week-7: SHOCK BOUNDARY LAYER INTERACTION

Shock Boundary Layer Interaction

Week-8: FLOW OVER A RE-ENTRY VEHICLES

Flow over a re-entry vehicle

Week-9: SUPER SONIC FLOW OVER A CONE

Flow over wedge body at supersonic Mach number; observe the shock wave phenomena and change of properties across the shockwave.

Week-10: THERMAL TESTING TURBINE BLADE

Flow over a Missile body

Week-11: CASCADE TESTING COMPRESSOR BLADE

- 1. Solution for the following equations using finite difference method
- 2. One dimensional wave equation using explicit method of lax.

Week-12: HEAT CONDUCTION

1. One dimensional heat conduction equation using explicit method.

COMPUTATIONAL AEROSPACE ENGINEERING LABORATORY

I Semester: AE								
Course Code	Category	Hours /Week			Credits	Maximum Marks		
BAEC12	Core	L	Т	Р	С	CIA	SEE	Total
		-	-	4	2	30	70	100
Contact Classes: Nil	Tutorials Classes: Nil	Practical Classes:36				Total Classes:36		

I. COURSE OVERVIEW:

This course aims to enhance the skills through a detailed introduction to the state-of-the-art computational methods and their applications for digital age aerospace engineering applications. It provides a unique opportunity for cross-disciplinary education and knowledge transfer in the computational engineering of fluid and solid mechanics for aerospace industrial applications. Focusing on fully integrated digital design for aerospace applications, you will be able to understand and implement numerical methods on various computing platforms for aerospace applications.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The basic MATLAB software and use them to solve structural aero dynamic and flight control system problems.
- II. Basics of plotting in MATLAB both in two dimensional and three dimensional.
- III. Coding for solving structural response problems, aerodynamic simulation problems and flight control system analysis and design.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO1	Make use of MATLAB and Simulink tools for solving aerospace engineering problems in designing.	Apply
CO2	Examine the thin-walled beams and shells using finite element method for analyzing the bending stiffness of aircraft structure.	Analyze
CO3	Solve the Burger's equation using explicit Mac Cormack method for analyzing fluid flows.	Analyze
CO4	Develop the numerical code for solving laminar flow over a flat plate.	Analyze
CO5	Make use of MATLAB and Simu-link for simulating the motion of aircraft and re-entry vehicles.	Analyze
CO6	Build the mathematical model by using different techniques for simulating satellite attitude dynamics.	Analyze

IV. LIST OF EXPERIMENTS:

Week-1: MATLAB/SIMULINK FUNDAMENTALS FOR AERO SPACE APPLICATIONS

MATLAB introduction, Plotting and graphics: Plot, log and semi-log plots, polar plots; Subplots, axis,mesh,contourdiagrams,flowdiagrams,movies,MATLABtoolboxes:continuoustransferfunctions,root locus, Nichols chart, Nyquist chart, linear quadratic regulator, state space design, digital design, aerospace toolbox; M cells, structures and M-files, MEX files; Standard simulink libraries, simulink aerospace blockset, Building simulink linear models: transfer function modelling in simulink, zero polemodel, state-space model; simulink LTI viewer and usage of it, equivalent simulink LTI models, single input single output design tool, building Multi-input, multi output models, building simulink S-functions; State flow introduction: Opening, executing, and saving state flow models, constructing a simple state flow model, using a state flow truth table.

Week-2: THIN WALLEDBEAMS

Software development for thin walled beams using finite element method.

Week-3: PLATE BENDING

Software development for Plate bending using finite element method.

Week-4: BEAMS ANALYSIS

Software development for Beams analysis using finite element method.

Week-5: TRUSSES ANALYSIS

Software development for Trusses analysis using finite element method.

Week-6: THIN SHELLS ANALYSIS

Software development for Thin shells analysis using finite element method.

Week-7: GENERATION OF STRUCTURES AND UNSTRUCTURED

Software development for simulation in generation of structures and unstructured grids in two and three dimensions of fluid flows.

Week-8: SOLUTION OF BURGERS EQUATION

Software development for simulation in solution of burgers equation using explicit McCormack method of fluid flows.

Week-9: BLASIUS SOLUTION FOR LAMINAR BOUNDARY LAYER OVER A FLAT PLATE

Software development for simulation in Blasius solution for laminar boundary layer over a flat plate of fluid flows

Week-10: RIEMANN SOLVER FOR SHOCK TUBE PROBLEM

Software development for simulation in Riemann solver for shock tube problem of fluid flows.

Week-11: SIMULATION OF AIRCRAFT MOTION

Simulation experiment in dynamics and control using MATLAB and simulink to Simulate aircraft motion such as longitudinal dynamics, lateral dynamics.

Week-12: SIMULATION OF AIRCRAFT MOTION WITH ILLUSTRATION OFF-16 MODEL

Six-degrees-of-freedom simulation of aircraft motion with illustration of F-16 model using MATLAB and simulink.

Week-13 SIMULATION OF RE-ENTRY VEHICLE DYNAMICS

Simulation of re-entry vehicle dynamics for ballistic re-entry and maneuvering re-entry.

Week-14: SIMULATION OF NON-LINEAR CONTROL SYSTEM

Simulation of non-linear control system for controlling roll dynamics of a fighter aircraft.

Week-15: SIMULATION OF SATELLITE ATTITUDE DYNAMICS

Simulation of the following relating to satellite attitude dynamics:

- a Torque free rotation of axi symmetric and asymmetric space craft.
- b. Attitude maneuvers of spin-stabilized spacecraft.

I. COURSE OVERVIEW:

Flight dynamics and control is the study of the performance, stability, and control of vehicles flying through the air or in outer space. It is concern with how the forces/moments are acting on the vehicle to determine its velocity and attitude with respect to time. This course is going to develop as an engineering science throughout succeeding generations of aircraft engineer to support increasing demands of aircraft stability and control and it now has a major role to play in the design of modern aircraft to ensure efficient, comfortable and safe flight. Modern aircraft control is ensured through automatic control systems known as autopilot. Their role is to increase safety, facilitate the pilot's task and improve flight qualities. The course will introduce modern aircraft stability and control and discuss some of its objectives and applications.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The fundamental principles of flight, controls, aerodynamic flows, forces and moments related to airfoils and aircrafts.
- II. The mathematical formulations of aerodynamic performance, stability and the equations of motion related to flight dynamics of a rigid body in linear and non-linear motion.
- III. The essential knowledge on coupled and decoupled equations of motion and the derivatives related to longitudinal and lateral dynamic stability of the air vehicles.
- IV. The advance concept of automated control and numerical simulations of aircraft stability for the development of the modern future aircrafts and flight vehicles.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Make use of the principles of flight and governing aerodynamics laws for the control of aircraft motions forgetting the desired aircraft attitude characteristics.	Understand
CO 2	Model the range, endurance and stability of equilibrium under different types of motions for calculating the aerodynamic performance of an airplane.	Understand
CO 3	Analyze the concept of aircraft dynamics, equations of motion in linear and nonlinear motion for optimal flight conditions.	Apply
CO 4	Determine the linear equations off motion and derivatives for the coupled and decoupled motion in terms of stability axis system by using small perturbation theory for obtaining the state of dynamic stability.	Understand
CO 5	Develop the mathematical model for the dynamic and static stability and its derivatives by using computational numerical simulation for the different types of aircrafts.	Apply
CO 6	Examine the flight control system by using control theories and modern computational tools system for the conventional and automatic flight of the aircraft.	Analyze

IV. COURSE SYLLABUS:

MODULE-I: INTRODUCTION (09)

Basic principles of flight; Flying control surfaces: Elevator, ailerons and rudder; Pilot's controls: The throttle, the

control column, modes of flight; Basic principles governing aero dynamic flows: Introduction, continuity principle, Bernoulli's principle, laminar flows and boundary layers, turbulent flows, aero dynamics of airfoils and wings, slender body aero dynamics, wing- body interference, emp ennage aero dynamics, aerodynamics of complete aircraft, aerodynamic forces and moments.

MODULE-II: MECHANICSOF EQUILIBRIUM FLIGHT (09)

Introduction, speeds of equilibrium flight, basic aircraft performance, conditions for minimum drag, range and endurance estimation, trim, stability of equilibrium flight, longitudinal static stability, maneuverability, lateral stability and stability criteria, experimental determination of aircraft stability margins; Aircraft non- linear dynamics; Equations of motion, introduction, aircraft dynamics, aircraft motion in a two dimensional plane, momentsofinertia, Euler "sequations and the dynamics of rigid bodies, aircraft equations of motion- induced aerodynamic forces and moments, non-linear dynamics of aircraft motion, trimmed equations of motion.

MODULE-III: SMALL PERTURBATIONS AND THE LINEARISED, DECOUPLED EQUATIONS OF MOTION (09)

Small perturbations and linearization; Linearizing the aerodynamic forces and moments: Stability derivative concept, direct formulation in the stability axis, decoupled equations of motion, decoupled equations of motion in terms of the stability axis aero dynamic derivatives, decoupled equations of motion in terms of the stability axis aero dynamic derivatives.

Non-dimensional longitudinal and lateral dynamics; Simplified state-space equations of longitudinal and lateral dynamics, simplified concise equations of longitudinal and lateral dynamics.

MODULE-IV: LONGITUDINAL AND LATERAL LINEAR STABILITY ANDCONTROL (09)

Dynamic and static stability, modal description of aircraft dynamics and the stability, aircraft lift and drag estimation, estimating the longitudinal aero dynamic derivatives, estimating the lateral aero dynamic derivatives, aircraft dynamic response, numerical simulation and non-linear phenomenon longitudinal and lateral modal equations, methods of computing aircraft dynamic response, system block diagram representation, atmospheric disturbance, deterministic disturbances, principles of random atmospheric disturbance modeling, application to atmosphericturbulencemodeling,aircraftnon-lineardynamicresponsephenomenon.

MODULE-V: AIRCRAFT FLIGHT CONTROL (09)

Automatic flight control systems: An introduction, functions of a flight control system, integrated flight control system design.

I. COURSE OVERVIEW:

Computational science and engineering involves the development and use of computational methods to simulate, predict, and understand important phenomena in this subject. The aerospace field is characterized by the complexity of the environments in which its systems operate — a complexity driven not only by extreme physical conditions, but by interactions with humans and by the need for robust performance in these settings. Many physical aerospace phenomena, such as turbulent combustion in gas turbine engines, transonic flow around transport aircraft, rarefied gas dynamics and ablation processes in atmospheric reentry, and countless more, that are essential to aerospace systems are both inaccessible in the laboratory and analytically intractable. Since the earliest days of computational fluid dynamics and computational mechanics, enormous efforts have been devoted to the development of predictive computational models of these complex processes.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The key factors affecting vehicles configuration.
- II. The basic concepts of gravitational terms in the equations of motion.
- III. The concepts of static stability, trim static performance.
- IV. The dynamic performance of space craft with respect to non-rotating planets.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO1	Identify the factors affecting vehicles configuration for determining its effect on flight characteristics.	Understand
CO2	Develop the equation of motion for operation of vehicle relative to the ground and flight for rigid flight vehicles using Newton's laws.	Apply
CO3	Construct the equation of motion of launch vehicle and spacecraft for static performance, impact of stability and control for the rotating planet.	Apply
CO4	Demonstrate the perturbed longitudinal equation of motion for static and dynamic stability of rigid flight vehicles.	Analyze
CO5	Inspect the impact of stability and design of longitudinal control of flight vehicles using numerical integration method.	Analyze
CO6	Examine the gliding re-entry vehicle with respect to a rotating planet using equations of motion of launch vehicles for dynamic performance.	Understand

IV. SYLLABUS:

MODULE-I: THE MORPHOLOGY OF FLIGHT VEHICLES (08)

Introduction, Key factors affecting vehicles configuration, some representative flight vehicles.

MODULE-II: EQUATIONS OF MOTION FOR RIGID FLIGHT VEHICLES AND INTRODUCTION TO VEHICLE AERODYNAMICS (10)

Equations of Motion for Rigid Flight Vehicles: Definitions, Vector and Scalar realizations of Newton's second law, The tensor of inertia, Choice of vehicle axes, Operation of the vehicle relative to the ground; flight

determination, Gravitational terms in the equations of motion, The state vector. Introduction to Vehicle Aerodynamics: Aerodynamics contributions to X, Y and M, dimensionless coefficients defined, equations of perturbed longitudinal motion.

MODULE-III: AIRCRAFT DYNAMICS AND STATIC STABILITY, TRIM STATIC PERFORMANCE AND RELATED SUBJECTS (10)

Aircraft Dynamics: Equations of Motion of Aircraft including forces and moments of control surfaces, Dynamics of control surfaces.

Static Stability, Trim Static Performance and Related Subjects: Impact of stability requirements on design and longitudinal control, Static performance.

MODULE-IV: DYNAMIC PERFORMANCE OF SPACECRAFT WITH RESPECT TONON-ROTATING PLANETS (09)

Introduction, Numerical integration of ordinary differential equations, Simplified treatment of boost from a non-rotating planet, An elementary look at staging, Equations of boost from a rotating planet.

MODULE-V: DYNAMIC PERFORMANCE OF SPACECRAFT AND DYNAMICPERFORMANCE-ATMOSPHERICENTRY (08)

Dynamic Performance of Spacecraft: Equations of Motion of Launch Vehicles with respect to a rotating planet, Motion of Spacecraft with respect to a rotating planet. Dynamic Performance-Atmospheric Entry: Equation of motion, Approximate analysis of gliding entry into a planetary atmosphere.

GUIDANCE AND CONTROLS

II Semester: AE											
Course Code	Category	Hours /Week			Credits	Maximum Marks					
BAEC15	Elective	L	Т	Р	С	CIA	SEE	Total			
		3	-	-	3	30	70	100			
Contact Classes:45	Tutorial Classes: Nil	Pra	ictica	l Class	es: Nil	Tota	al Classes:	45			

I. COURSE OVERVIEW:

Missile guidance refers to a variety of methods of guiding a missile or a guided bomb to its intended target. The missile's target accuracy is a critical factor for its effectiveness. Guidance systems improve missile accuracy by improving its Probability of Guidance. These guidance technologies can generally be divided up into a number of categories, with the broadest categories being "active," "passive" and "preset" guidance. This course deals with the introduction to missile system, airframe, autopilots and the guidance laws. Also deals with strategic missile systems used for the warfare and automatic delivery systems of the modern missiles and aircrafts.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The advanced concepts of missile guidance and control.
- II. Exposure on missile systems, missile airframes, auto pilots, guidance laws.
- III. Skills effectively in the understanding of missile guidance and control.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Understand the historical background of the development of the missile guidance system	Understand
CO 2	Apply the knowledge of the Equations of motions to solve the missile trajectory characteristics	Apply
CO 3	Apply the basic principles of Autopilot systems used in missile guidance and its types	Apply
CO 4	Demonstrate the guidance laws and techniques of guidance systems and navigation system	Understand
CO 5	Apply the concept of Lamberts theorem, on missile guidance and accuracy in strategic missile	Apply
CO 6	Analyze the weapon delivery systems with guided and unguided weapon systems	Analyze

IV. SYLLABUS:

MODULE-I: MISSILE SYSTEMS INTRODUCTION (08)

History of guided missile for defence applications, classification of missiles, the generalized missile equations of motion coordinate Systems, Lagrange's equations of or rotating coordinate systems rigid-body equations of motion missile system elements, missile ground systems.

MODULE-II: MISSILE AIR FRAMES, AUTO PILOTS AND CONTROL (10)

Missile aerodynamics: Force equations, moment equations, phases of missile flight; Missile control configurations; Missile mathematical model; Autopilots: Definitions, types of autopilots, example applications, open-loop autopilots; Inertial instruments and feedback; Autopilot response, stability and agility-pitch auto pilot design, pitch-yaw-roll autopilot design.

MODULE-III: MISSILE GUIDANCE LAWS (10)

Tactical guidance intercept techniques, derivation of the fundamental guidance equations, explicit, proportional navigation, augmented proportional navigation, beam riding, bank to turn missile guidance.

Three-dimensional proportional navigation, comparison of guidance system performance, application of optimal control of linear feedback systems.

MODULE-IV: STRATEGIC MISSILES (09)

Introduction, the two-body problem, Lambert's theorem, first order motion of a ballistic missile , correlated velocity and velocity-to-be-gained concepts, derivation of the force equation for ballistic missiles, atmospheric re-entry, ballistic missile intercept, missile tracking equations of motion, introduction to cruise missiles, the terrain contour matching concept.

MODULE-V: WEAPON DELIVERY SYSTEMS (08)

Dynamic Performance of Spacecraft: Equations of Motion of Launch Vehicles with respect to a rotating planet, Motion of Spacecraft with respect to a rotating planet. Dynamic Performance-Atmospheric Entry: Equation of motion, Approximate analysis of gliding entry into a planetary atmosphere.

ROCKETS AND MISSILES

II Semester: AE											
Course Code	Category	Hours /Week			Credits	Maximum Marks					
BAEC16	Elective	L	Т	Р	С	CI A	SEE	Total			
		3	-	-	3	30	70	100			
Contact Classes:45	Tutorial Classes: Nil	Practical Classes: Nil TotalClasse					lasses:4	15			

I. COURSE OVERVIEW:

This course deals in detail about rockets propulsion systems. This course includes various equation of motion and various moments of a rocket. It compares and contrasts various thrust vector control mechanisms of nozzle and cooling systems of combustion chamber. It discusses on various materials and its properties that are used for manufacturing of rocket and missiles. This course also covers the basic concepts of guidance of missile and various types of tactical guidance systems and techniques.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The fundamental concepts of various rocket propulsion systems, combustion process and forces/moments acting on the rocket under static and dynamic conditions.
- II. Various components and propellants of a chemical rocket propulsion system with its characteristics and applications.
- III. The various aerodynamic forces and moments acting on a rocket.
- IV. Properties of different materials that are used in manufacturing of various rocket and missile components.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO1	Apply the knowledge of combustion systems and feed systems of rockets for selecting the suitable component based on the mission requirement.	Understand
CO2	Utilize the knowledge of aerodynamic forces and moments of Rockets and missiles for designing with optimum performance.	Apply
CO3	Apply the concepts of 1-D, 2-D rocket motions in free space and gravitational fields for solving the problems in space.	Analyze
CO4	Analyze the combinations of trajectories, range, altitude and velocity of rockets and missiles for specific application.	Apply
CO5	Categorize the staging and controls of planned rocket and missiles for providing sufficient capability such as speed, range, and maneuverability.	Apply
CO6	Make use of the selection criteria of materials properties for designing new components under adverse conditions.	Understand

IV. COURSE SYLLABUS:

MODULE-I: ROCKETSYSTEMS (08)

Ignition system in rockets, types of igniters, igniter design considerations; Design consideration of liquid rocket combustion chamber, injector propellant feed lines, valves, propellant tanks and their outlets; Pressurized and turbine feed systems; Propellant slosh and propellant hammer; Elimination of geysering effect in missiles; Combustion system of solid rockets.

MODULE-II: AERODYNAMICS OF ROCKET AND MISSILES (10)

Airframe components of rockets and missiles; Forces acting on a missile while passing through atmosphere; Classification of missiles; Method of describing aerodynamic forces and moments; Lateral aero dynamic

moment; Lateral damping moment and longitudinal moment of a rocket; Lift and drag forces; Drag estimation; Body up wash and down wash in missiles; Rocket dispersion; Numerical problems.

MODULE-III: ROCKET MOTION IN FREE SPACE AND GRAVITATIONAL FIELD (10)

One dimensional and two dimensional rocket motions in free space and homogeneous gravitational fields; Description of vertical, inclined and gravity turn trajectories.

Determination of range and altitude; Simple approximations to burn out velocity.

MODULE-IV: STAGING AND CONTROL OF ROCKET AND MISSILES (09)

Rocket vector control, methods, thrust termination; Secondary injection thrust vector control system; Multistage of rockets; Vehicle optimization; Stage separation dynamics; Separation techniques.

MODULE-V: MATERIALS FOR ROCKET AND MISSILES (08)

Selection of materials; Special requirements of materials to perform under adverse conditions.

GROUND VEHICLE AERODYNAMICS

II Semester: AE								
Course Code	Category	Hours /Week			Credits	Maximum Marks		
BAEC17	Elective	L	Т	Р	С	CIA	SEE	Total
		3	-	-	3	30	70	100
Contact Classes:45	Tutorial Classes: Nil	Practical Classes: Nil					Fotal Classes	s:45

I. COURSE OVERVIEW:

This subject deals with automotive Aerodynamics is the study of air flows around and through the vehicle body. More generally, it can be labelled "Fluid Dynamics" because air is really just a very thin type of fluid. Above slow speeds, the air flow around and through a vehicle begins to have a more pronounced effect on the acceleration, top speed, fuel efficiency and handling. Influence of flow characteristics and improvement of flow past vehicle bodies to reduction of fuel consumption, more favorable comfort characteristics (mud deposition on body, noise, ventilating and cooling of passenger compartment) and improvement of driving characteristics (stability, handling, traffic safety)

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The basics of vehicle aerodynamics, history of developments and apply the concepts of fluid mechanics to automobiles.
- II. The drag on ground vehicles and analyze the effects of various configurations of cars on drag.
- III. The stability and handling qualities based of ground vehicles due to side wind loads and dirt accumulation.
- IV. The concepts to race car design and understand various experimental techniques applied in automotive aerodynamics.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Apply the knowledge of fluid mechanics, and aerodynamics for designing a frontal portion of a vehicle.	Apply
CO 2	Analyze the lateral stability problems of vehicle to improve the vehicle dynamics under different conditions.	Analyze
CO 3	Apply the knowledge of mechanisms, and measurement techniques for the stability of ground vehicle	Apply
CO 4	Apply the knowledge of flow behavior over different components of race vehicle for designing a race car	Apply
CO 5	Apply the knowledge of wind tunnel test for optimizing the ground vehicle design.	Apply
CO 6	Apply the knowledge of measuring equipment and transducers to investigate the roadside performance of vehicle.	Apply

IV. SYLLABUS:

MODULE-I: OVERVIEW AND INTRODUCTION (10)

Historical developments and trends, fundamentals of fluid mechanics, flow phenomenon related to vehicles, external and internal flow problem, resistance to vehicle motion, mechanics of air flow around a vehicle, pressure distribution, aero dynamic forces, vehicle drag and types, side and lift forces, performance potential of vehicle aerodynamics.

MODULE-II: AERODYNAMIC DRAG AND SHAPE OPTMIZATION OF CARS (10)

Cars as a bluff body, flow field around a car, analysis of aerodynamic drag, drag coefficient of cars, strategies for aerodynamic development, low drag profiles. Frontend modification, front and rear wind shield angle, boat tailing, hatchback, fastback and square back, dust flow patterns at the rear, effect of rear configuration, effect of fasteners.

MODULE-III: VEHICLE HANDLING AND STABILITY (09)

Origin, characteristics and effects of forces and moments on a vehicle, lateral stability problems. Vehicle dynamics under side winds, dirt accumulation on the vehicle, wind noise: Mechanisms and generation design features, measurement and techniques.

MODULE-IV: RACE CAR AERO DYNAMICS (08)

Basic vehicle body concepts, aerodynamics of the complete vehicle, flow over wheels, sliding seal and skirts, under body channels, simple add on: spoilers, strakes and wickers, internal flow, race car wings, most current examples in detail design.

MODULE-V: MEASUREMENT AND TEST TECHNIQUES (08)

Wind tunnel scope, fundamental techniques, simulation limitations, prototype tests, wind tunnel types and testing methods, test techniques: scope, measuring equipment and transducers, road testing methods.

EXPERIMENTAL STRESS ANALYSIS

II Semester: AE								
Course Code	Category	Hours /Week			Credits	Maximum Marks		
	Elective	L	Т	Р	С	CIA	SEE	Total
BAECIO		3	-	-	3	30	70	100
Contact Classes:45	Tutorial Classes: Nil	P	ractica	al Classe	es: Nil]	Fotal Classes	s: 45

I. COURSE OVERVIEW:

This course deals with theory behind the experimental techniques and their process. The main focus is on principal of measurements and their uses on the practical problems. The students will learn about the electrical circuits, their sensitivity and effects. Broad knowledge on the two photo-elasticity concepts, techniques, materials used and their effects. A glimpse of three dimensional photo elasticity will be given. Various applications of coatings will be discussed along with advantages. A view point on calibration photo elastic model materials is appreciated. Two element and three element rosettes and gauges are addressed.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The effects of force and motion while carrying out the innovative design functions of engineering. Bring awareness on experimental method of finding the response of the structure to different types of load.
- II. The relation between the mechanics theory, experimental stress analysis, and the mechanical, optical, pneumatic and electrical strain gauges for strain measurement.
- III. The fundamental concepts and newly experimental techniques and able to use the experimental techniques on the practical problems.
- IV. The fine presentation related to the experimental paper.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Understand the principles and range of measurements used to discover the responses of the structure	Understand
CO 2	Apply about the various extensor meters for finding the response of the structure to different types of loads.	Apply
CO 3	Analyse the strain sensitivity in metallic alloys and techniques for strain measurement	Analyze
CO 4	Make a use of the two- and three-dimensional photo elasticity concepts and effects	Apply
CO 5	Apply the various photo-elastic coatings, methods and their applications to the study of stress distribution	Apply
CO 6	Explain the effect of stress model, fringe order techniques and calibration photo elastic model materials	Apply

IV. COURSE SYLLABUS:

MODULE-I: MEASUREMENTS & EXTENSOMETER (10)

Principles of measurements, accuracy, sensitivity and range of measurements; Mechanical, optical acoustical and electrical extensometers and their uses, advantages and disadvantages.

MODULE-II: ELECTRICAL RESISTANCE STRAIN GAGES (08)

Strain sensitivity in metallic alloys, gage construction, adhesives and mounting techniques, gage sensitivity and gage factor, performance characteristics, environmental effects, strain gage circuits; Potentiometer, wheat stone's bridges, constant current circuits.

MODULE-III: TWO AND THREE DIMENSIONAL PHOTO-ELASTICITY (10)

Two dimensional photoelasticity; Concepts of light-photo-elastic effects, stress optic law-interpretation of fringe pattern-compensation and separation techniques; Photoelastic materials; Introduction to three dimensional photoelasticity.

Photoelastic (Bi-refringent) coatings, effects of coating thickness, brittle coatings, types of brittle coatings, advantages and brittle coating applications, crack detection methods and Moire methods: Applications and advantages.

MODULE-IV: PHOTO-ELASTICITY (09)

Nature of light, wave theory of light, optical interference, stress optic law, effect of stressed model in plane and circular polariscopes, isoclinics and iso-chromatics, fringe order determination fringe multiplication techniques, calibration photoelastic model materials.

MODULE-V: STRAIN ANALYSIS METHODS (08)

Two element, three element rectangular and delta rosettes, correction for transverse strain effects, stress gauge, plane shear gauge, and stress intensity factor gauge.

ATMOSPHERIC RE ENTRY VEHICLES

II Semester: AE												
Course Code	Category	Hours /Week			Credits	Maximum Marks						
BAEC19	Elective	L	Т	Р	С	CIA	SEE	Total				
		3	-	-	3	30	70	100				
Contact Classes:45	Tutorial Classes: Nil	Practical Classes: Nil Total Classes:45										

I. COURSE OVERVIEW:

This course deals with fundamental aspects of an anatomy of re-entry module and the current trends in airframe design. It includes the evolution of the re-entry module in space industry, aerodynamics and performance of the module with their applications. It compares and contrasts various thrust vector control mechanisms of different types of atmospheric re-entry. It discusses various materials and its properties that are used for manufacturing different parts of re-entry module. This course enriches the knowledge of connection between theoretical and practical methods for performing re-entry in atmosphere.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The basic mechanism of reentry vehicle.
- II. Aerodynamic principles and flight dynamics.
- III. The equations of motion for reentry vehicles.
- IV. The properties of different materials that are used in industries for manufacturing various components of an aircraft and spacecraft.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

1		
CO 1	Understand the theoretical knowledge behind the design and development of re- entry module and distinguishes them based on the mission requirements.	Understand
CO 2	Apply Newton's law of motion to determine the governing equations for interpreting the physics of flow over a re-entry module.	Apply
CO 3	Identify and obtain values of performance parameters of a re-entry module based on the aerodynamic forces and moments acting on the body at different practical scenarios.	Apply
CO 4	Describe the properties of an international standard atmosphere for identifying the suitable re-entry module to fly for different practical scenarios such as conventional transport, human space flight missions etc.	Apply
CO 5	Explain the different types of stability techniques and their usage in real world applications by understanding its limitations and safety measures.	Apply
CO 6	Explain different material properties and their usage in different segments of re-entry module	Apply

IV. COURSE SYLLABUS:

MODULE-I: OVERVIEW AND INTRODUCTION (08)

Classical point mass mechanics, mechanics of rigid bodies, topography and gravitation, the geodetic frame of reference, the terrestrial field of gravitation, models of atmosphere, main parameters and hypotheses, the isothermal exponential model, standard models of earth's atmosphere, martian models.

MODULE-II: AERODYNAMICS (10)

Aerodynamic coefficients, modes off low, continuous mode, rare field mode, qualities of flight, characteristics of a family of sphere cones, planetary entry capsule.

MODULE-III: SPECIAL TREATMENT FOR REENTRY VEHICLE (10)

Inertial Models: Moments of inertia, cg off set and principal axis misalignment; Changing of Reference Frame: Direction cosine matrices, Euler angles, representations with four parameters.

Exo atmospheric phase: Movement of the center of mass, movement around mass center.

MODULE-IV: EQUATIONS OF MOTION (09)

Six degree-of-freedom reentry: General equations of motion, solutions of general equations, zero angle of attacker entry; Allen's reentry results, influence of ballistic coefficient and flight path angle, influence of range; Decay of initial incidence: Zero spinrate, nonzero spin.

MODULE-V: FLIGHT DYNAMICS OF RE ENTRY VEHICLE (08)

End of the convergence of the incidence: Linear equations, instantaneous angular movement, real angular motion; Roll-lock-in Phenomenon: Association of aerodynamic asymmetry and cg offset, isolated center of gravity, isolated principal axis misalignment, combined cg offset and principal axis misalignment, instabilities: static instabilities, dynamic instabilities; Reentry errors: Zero angle-of-attack dispersions, non zero angle of attack.

HYPERSONIC AND HIGH-TEMPERATURE GAS DYNAMICS

II Semester: AE								
Course Code Category Hours /Week Credits Maximum Mark							larks	
		L	Т	Р	С	CIA	SEE	Total
DALC20	Liecuve	3	-	-	3	30	70	100
Contact Classes: 45	Tutorial Classes: Nil	Practical Classes: Nil				Total Classes: 45		

I. COURSE OVERVIEW:

This particular course has been deigned to cover aerodynamic features of hypersonic flows with their basic governing equations and their applications in various flow fields. It also provides a comprehensive training experience in the basic principles, technologies and methodologies pertaining to the multi-disciplined realm of hypersonic flight. Participants will acquire a sound understanding of hypersonic aero physics and the effects of the hypersonic flight environment on vehicle loads and performance, including a consideration of both continuum flow and rarefied flow aerodynamic effects.

II.COURSE OBJECTIVES:

The students will try to learn:

- I. The fundamental description of hypersonic flow phenomena, including aerodynamic heating and non-equilibrium real-gas effects.
- II. The fundamental features of hypersonic flows, and how these differ from other flows.
- III. The importance and influence of non-equilibrium real-gas effects in high temperature flows.
- IV. The physical mechanisms causing aerodynamic heating of high-speed vehicles

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Summarize the fundamental aspect of hypersonic flow and their characteristics for solving the hypersonic flow over arbitrary shape.	Understand
CO 2	Construct the equation for variation flow properties for shock and expansion waves in hypersonic flow.	Apply
CO 3	Make a use of equivalence principle and various theories to model shock interaction in hypersonic flow field.	Apply
CO 4	Build the governing equation for viscous hypersonic laminar and turbulent boundary layer.	Apply
CO 5	Select suitable computational fluid dynamic model to solve hypersonic viscous flow.	Apply
CO 6	Construct the governing equation for high temperature inviscid equilibrium and non-equilibrium flow over an arbitrary body.	Apply

IV. SYLLABUS:

MODULE-I: OVERVIEW AND INTRODUCTION (08)

Hypersonic flight: Some historical firsts; Hypersonic flow: why is it important, what is it; Fundamental sources of aerodynamic force and aerodynamic heating; Hypersonic flight paths: velocity-altitude map; Hypersonic shock and expansion-wave relations: hyper sonics hock and expansion-wave relations, hypersonic shock relations in terms of the hypersonic similarity parameter, hypersonic expansion-wave relations.

MODULE-II: SURFACE IN CLINATION METHODS AND THEORIES (10)

Local surface inclination methods: Newtonian flow, modified Newtonian law, centrifugal force corrections to Newtonian theory, tangent-wedget an gent-cone methods, shock-expansion method; Hypersonic inviscid flow fields: Approximate methods: Governing equations, mach-number independence, hypersonic smalldisturbance equations, hypersonic similarity; Hypersonic small-disturbance theory: Some results, hypersonic equivalence principle and blast-wave theory, thin shock-layer theory; Hypersonic inviscid flow fields: Exact methods: method of characteristics, time-marching finite difference method, correlations for hypersonic shock-waveshapes, shock-shock interactions, space-marching finite difference method.

MODULE-III: VISCOUS FLOW AND HYPERSONIC VISCOUS INTERACTIONS (10)

Viscous flow: Basic aspects boundary layer results and aerodynamic heating: Governing equations for viscous flow: Navier– stokes equations, boundary-layer equations for hypersonic flow, hypersonic boundary-layer theory, non-similar hypersonic boundary layers, hypersonic transition, hypersonic turbulent boundary layer, reference temperature method.

Hypersonic viscous interactions: Strong and weak viscous interactions, role of x in hypersonic viscous interaction, hypersonic shock-wave / boundary-layer interactions, computational-fluid-dynamic solutions of hypersonic viscous flows, viscous shock-layer technique, Parabolized Navier–stokes solutions, full navier–stokes solutions.

MODULE-IV: HIGH-TEMPERATURE GAS DYNAMICS (10)

Importance of high-temperature flows, nature of high-temperature flows; Chemical effects in air: The velocityaltitude map; Elements of kinetic theory: Perfect-gas equation of state, collision frequency and mean free path, velocity and speed distribution functions, definition of transport phenomena, transport coefficients, mechanism of diffusion, energy transport by thermal conduction and diffusion, transport properties for high-temperature air.

MODULE-V: INVISCID HIGH-TEMPERATURE EQUILIBRIUM FLOWS AND NONE QUILIBRIUM FLOWS (09)

Governing equations for inviscid high-temperature equilibrium flow, equilibrium normal and oblique shockwave flows, equilibrium quasi-one-dimensional nozzle flows, frozen and equilibrium flows, equilibrium and frozen specific heats, equilibrium speed of sound, equilibrium conical flow, equilibrium blunt-body flows, governing equations for inviscid, non-equilibrium flows, non-equilibrium normal and oblique shock-wave flows, non-equilibrium quasi-one-dimensional nozzle flows, non-equilibrium blunt- body flows, binary scaling,non-equilibriumflowoverothershapes:non-equilibriummethod of characteristics.

TURBO MACHINERY AND DYNAMICS

II Semester: AE								
Course Code Category Hours /Week Credits Maximum Marks							Marks	
	Elective	L	Т	Р	С	CIA	SEE	Total
DALC21		3	-	-	3	30	70	100
Contact Classes:45 Tutorial Classes: Nil			Practical Classes: Nil Total Classes: 45					

I. COURSE OVERVIEW:

This course provides an introduction to the working principles, performance and design of turbo machinery. The course first covers a review of essential fluid and thermo-dynamics. Concepts relevant to all turbo machines are then introduced. Axial turbines and compressors are studied in depth, including their kinematics, performance and design. The three-dimensional effects in turbo machinery, centrifugal machines, propellers, hydraulic turbines and wind turbines.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The working principles of turbines and pumps/compressors
- II. The basic loading and performance analysis for a variety of machines
- III. The fluid-thermodynamic mechanisms associated with performance degradation
- IV. The basic operating principles of centrifugal machines, propellers, hydraulic turbines and wind turbines.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Relate the working principles of turbo machines for predicting its thermodynamic.	Analyze
CO 2	Demonstrate typical designs of turbo machines and differentiate from positive displacement machines.	Understand
CO 3	Illustrate the off-design behavior of turbines and compressors and relate it to changes in the velocity triangles.	Apply
CO 4	Analyze the relations between choices made early in the turbo machinery design process and the final components and operability.	Analyze
CO 5	Apply the Euler's equations for turbomachinery to analyze energy transfer in turbomachines	Apply
CO 6	Analyze the performance of turbo machinery by using the preliminary designs of pumps, compressors and turbines.	Analyze

IV. SYLLABUS:

MODULE-I: ENERGY TRANSFER IN TURBOMACHINES (08)

Application of first and second laws of thermodynamics to turbo machines, moment of momentum equation and Euler turbine equation, principles of impulse and reaction machines, degree of reaction, energy equation for relative velocities, one dimensional analysis only.

MODULE-II: STEAM TURBINES (10)

Impulse staging, velocity and pressure compounding, utilization factor, analysis for optimum U.F curtis stage, and rate stage, include qualitative analysis, effect of blade and nozzle losses on vane efficiency, stage efficiency and analysis for optimum efficiency, mass flow and blade height; Reactions staging: Parson's stages, degree of reaction, nozzle efficiency, velocity coefficient, stator efficiency, carry over efficiency, stage efficiency, vane efficiency, conditions for optimum efficiency, speed ratio, axial thrust, reheat factor in turbines, problem of radial equilibrium, free and forced vortex types of flow, flow with constant reaction, governing and performance characteristics of steam turbines.

MODULE-III: WATER TURBINES (10)

Classification, Pelton, Francis and Kaplan turbines, vector diagrams and work-done, draft tubes, governing of water turbines; Centrifugal pumps: classification, advantage over reciprocating type, definition of mano-metric head, gross head, static head, vector diagram and work done.

Performance and characteristics: Application of dimensional analysis and similarity to water turbines and centrifugal pumps, unit and specific quantities, selection of machines, hydraulic, volumetric, mechanical and overall efficiencies, Main and operating characteristics of the machines, cavitations.

MODULE-IV: ROTARY FANS, BLOWERS AND COMPRESSORS (09)

Classification based on pressure rise, centrifugal and axial flow machines; Centrifugal Blowers Vane shape, velocity triangle, degree of reactions, slip coefficient, size and speed of machine, vane shape and stresses, efficiency, characteristics, fan laws and characteristics; Centrifugal Compressor – Vector diagrams, work done, temp and pressure ratio, slip factor, work input factor, pressure coefficient, Dimensions of inlet eye, impeller and diff user; Axial flow compressors; Vector diagrams, work done factor, temp and pressure ratio, degree of reaction, dimensional analysis, characteristics, surging, polytrophic and is entropic efficiencies.

MODULE-V: POWER TRANSMITTING TURBO MACHINES (08)

Application and general theory, their torque ratio, speed ratio, slip and efficiency, velocity diagrams, fluid coupling and Torque converter, characteristics, positive displacement machines and turbo machines, their distinction; Positive displacement pumps with fixed and variable displacements, hydrostatic system shy draulic intensifier, accumulator, press and crane.

ADVANCED FINITE ELEMENT METHODS

II Semester: AE								
Course Code	Category	Category Hours /Week Credits Maximum Marks					arks	
		L	Т	Р	С	CIA	SEE	Total
BAEC22	Liecuve	3	-	-	3	30	70	100
Contact Classes:45 Tutorial Classes: Nil		Practical Classes: Nil				Total Classes:45		

I. COURSE OVERVIEW:

The course covers principles of finite element method as applied to linear and non-linear problems. The course will start by reviewing fundamentals of finite element method including discretization, element formulation, assembling process, boundary conditions, solving system of equations, and post processing. The focus will then shift to non-linear FEM. A brief summary of variational calculus and the classical theory of plasticity will be followed by the theory of non-linear FEM including various numerical integration schemes. This course will also include use of software/programming with available codes/in-house codes in solving nonlinear problems.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The theory and characteristics of finite elements that represent engineering structures.
- II. The finite element solutions to structural, thermal, dynamic problem to develop the knowledge and skills needed to effectively evaluate finite element analyses.
- III. The application and characteristics of FEA elements such as bars, beams, plane and iso-parametric elements.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Understand the concepts behind the weak formulation methods in FEM.	Understand
CO 2	Identify the application and characteristics of FEA elements such as bars, beams, plane and iso-parametric elements.	Apply
CO 3	Illustrate the element characteristic equation and generation of global equation.	Apply
CO 4	Analyze the solution obtained for various boundary conditions suitable to a global equation for bars, trusses, beams, circular shafts, heat transfer, fluid flow, axi symmetric and dynamic problems and solve them displacements, stress and strains induced.	Analyze
CO 5	Apply the numerical methods on heat transfer problems for developing thermal stiffness matrix and thermal load vector.	Apply
CO 6	Illustrate the concept of spring-mass system for obtaining the eigen values and eigen vectors of various structural problems.	Apply

IV. SYLLABUS:

MODULE-I: INTRODUCTION (08)

Review of various approximate methods – Rayleigh-Ritz and Galerkin - Stiffness matrices for simple cases - Basic concepts of finite element method - Formulation of governing equations and convergence criteria.

MODULE-II: DISCRETE ELEMENTS (10)

Structural analysis of bar and beam elements for static and dynamic loadings. Bar of varying section – Temperature effects in bar elements.

MODULE-III: CONTINUUM ELEMENTS (10)

Plane stress, Plane strain and Axi-symmetric problems – CST Element – LST Element. Consistent and lumped load vectors.

Use of local co-ordinates. Numerical integration. Application to heat transfer problems. Solution for 2-D problems (static analysis and heat transfer).

MODULE-IV: ISOPARAMETRIC ELEMENTS (09)

Definition and use of different forms of 2-D and 3-D elements. - Formulation of element stiffness matrix and load vector. Solution for 2-D problems.

MODULE-V: SOLUTION SCHEMES (08)

Virtual work principle, Formulation of governing equation based on virtual work principle for static and dynamic problems.

FLIGHT SIMULATION AND CONTROLS LABORATORY

II Semester: AE								
Course Code	Category	Но	urs /W	/eek	Credits	Ma	aximum I	Marks
BAEC23	Com	L	Т	Р	С	CIA	SEE	Total
	Core	-	-	4	2	30	70	100
Contact Classes: Nil	Tutorial Classes: Nil	Practical Classes: 36			Το	tal Class	ses:36	

I. COURSE OVERVIEW:

Flight simulation and Control is the science that investigates the stability and control of aircrafts and all other flying vehicles. From the advent of the first flight by the Wright Brothers, it was observed that flight without knowledge of stability and control was not viable. Since then, several different concepts for controlling aircraft flight have been devised including control surfaces, deformable surfaces, morphing of wings etc. This course introduces some of these concepts and describes their operation, as well as the degree of stability that these devices can provide. Modern aircraft control is ensured through automatic control systems known as autopilot. Their role is to increase safety, facilitate the pilot's task and improve flight qualities. The course will introduce modern aircraft stability and control and discuss some of its objectives and applications

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The basics simulation of un accelerated and accelerated level flight for climb and descend.
- II. The takeoff and landing performance and ground roll for different modes of aircraft.
- III. The basic controls and maneuver of in complex flight path.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Choose the appropriate flight path using flight simulator for simulating the unaccelerated and accelerated flights.	Understand
CO 2	Estimate the take-off velocity, ground roll distance, and landing distance using flight simulator for the Cessna aircraft.	Apply
CO 3	Make use of flight simulator's mission profiles for simulating the different flight maneuvers.	Analyze
CO 4	Examine the longitudinal and lateral perturbed stability of aircraft for obtaining desired operational ability.	Apply
CO 5	Analyze lateral and directional coupled dynamic stability for a given aircraft to simulate spin recovery.	Apply
CO 6	Determine turn rates, radius and barrel roll by using flight simulator for assessing flight performance in given condition.	Analyze

IV. LIST OF EXPERIMENTS

Week-1: SIMULATION OF UNACCELERATED AND ACCELERATED LEVEL FLIGHT

- Implement the following tasks
- 1. Simulation of steady flight
- 2. Simulation of accelerated level flight at various altitudes

Week-2: SIMULATION OF UNACCELERATED AND ACCELERATED CLIMB

Implement the following tasks

- 1. Simulation of steady climb
- 2. Simulation of accelerated climb at various climb rates

Week-3: SIMULATION OF UNACCELERATED AND ACCELERATED DESCENT

Implement the following tasks

- 1. Simulation of steady descent
- 2. Simulation of accelerated descent at various descentrates

Week-4: SIMULATION OF TAKE-OFF PERFORMANCE

Implement the following tasks

1 Estimation of take off velocity for Cessna flight.

Week-5: SIMULATION OF LANDING PERFORMANCE

Implement the following tasks

- 1. Estimation of ground roll distance for Cessna flight
- 2. Estimation of total landing distance for Cessna flight

Week-6: SIMULATION OF CONVENTIONAL FLIGHT PATH

Implement the following tasks

1. Perform the given mission profiles

Week-7: STABILIZATION OF LONGITUDINAL PER TURBED AIRCRAFT

Implement the following tasks

- 1. Perform the operation from disturbed flight to trim flight
- 2. Perform long period and short period modes.

Week-8: STABILIZATION OF LATERAL PERTURBED AIRCRAFT

Implement the following tasks

- 1. Perform the operation from disturbed flight to trim flight
- 2. Simulate lateral directional modes.

Week-9: SIMULATION OF SPIN RECOVRY

Implement the following tasks

1. Perform the operation of spin recovery

Week-10: SIMUILATION OF COORDINATED LEVEL TURN

Implement the following tasks

- 1. Perform the level turn at given turn rate.
- 2. Perform the level turn at given turn radius.

Week-11: SIMUILATIONOFBARRELROLLMANEUVER

Implement the following tasks

1. Perform the barrel roll maneuver

Week-12: SIMULATIONOFACOMPLEXFLIGHTPATH

Implement the following tasks

1. Perform flight simulation for given mission profiles

	C	L	Т	Р	С	CIA	SEE	Total
DALC24	Core		-	4	2	30	70	100
Contact Classes: Nil	Tutorial Classes: Nil]	Pract	ical Cla	sses:36		Fotal Cl	asses:36

I. COURSE OVERVIEW:

The major emphasis of this course is to solve a complex geometrical structure under a given loads, these methods does not have analytical solutions. Software's like ANSYS and NASTRAN is utilized to interpret results for complex geometries. Modeling of crack and composite structures help the students to solve realistic problems which are common in industries. Structural analysis on aircraft structures and Rocket components are delt to obtain the solution for bending and torsion under the applied aerodynamic loads.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The utilization of ANSYS and NASTRAN software to obtain the solution for complex geometrical structures.
- II. The mathematical methods involved in structural mechanics along with its strengths and weakness.
- III. Modeling a structural crack in ANSYS and NASTRAN and determine its failure loads.
- IV. Modeling a complex composite structure in ANSYS and NASTRAN and determine the stresses and strains.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Develop the appropriate method for predicting ultimate load on wing using ANSYS.	Analyze
CO 2	Estimate the rocket motor case loading for the launch vehicle by using computational tools.	Analyze
CO 3	Examine the thermal and structural loading on exposed components during the flight mission for obtaining airworthiness suitability.	Analyze
CO 4	Make use of the structural fatigue concept for obtaining desired operational characteristics.	Analyze
CO 5	Analyze the effect of fracture during bird hit using L S Dyna simulation for failure rate of an aircraft.	Analyze
CO 6	Determine the failure mode during fracture of an aircraft component for assessing crack propagation.	Analyze

IV. LIST OF EXPERIMENTS

Week-1: AEROSPACE STRUCTURAL ANALYSIS USING ANSYS-I

Implement the following task

1.Structural analysis of aircraft wing

Week-2: AEROSPACE STRUCTURAL ANALYSIS USING ANSYS-II

Implement the following task

1.Structural analysis of aircraft win g(composite material)

Week-3 : AEROSPACE STRUCTURAL ANALYSIS USING ANSYS-III

Implement the following task

Week-4: AEROSPACE STRUCTURAL ANALYSIS USING ANSYS-IV

Implement the following task 1.Rocket motor case analysis

Week-5: AEROSPACE STRUCTURAL ANALYSIS USING ANSYS-V Implement the following tasks 1.Structural and thermal analysis of rocket nozzles

Week-6 : AEROSPACE STRUCTURAL ANALYSIS USING ANSYS-VI Implement the following task 1.Fractural mechanics of crack propagation

Week-7: AEROSPACE STRUCTURAL ANALYSIS USING NASTRA-I Implement the following task 1.Structural analysis of aircraft wing

Week-8: AEROSPACE STRUCTURAL ANALYSIS USING NASTRA-II Implement the following task 1.Structural analysis of aircraft wing (composite material)

Week-9: AEROSPACE STRUCTURAL ANALYSIS USING NASTRA-III Implement the following task 1.Analysis of fuselage

Week-10: AEROSPACE STRUCTURAL ANALYSIS USING NASTRA-IV Implement the following tasks Rocket motor case analysis

Week-11: AEROSPACE STRUCTURAL ANALYSIS USING NASTRA-V

Implement the following task 1.Structural and thermal analysis of rocket nozzles

Week-12: AEROSPACE STRUCTURAL ANALYSIS USING NASTRA-VI

Implement the following task 1.Fractural mechanics of crack propagation

MINI PROJECT WITH SEMINAR

II Semester: AE								
Course Code	Category	Hours / Week Credits Maximun						Marks
DAEC25	Corro	L	Т	Р	С	CIA	SEE	Total
DAEC25	Core	0	0	4	2	30	70	100
Contact Classes: Nil	Tutorial Classes: Nil		Practi	cal Clas	sses: 45	То	tal Class	es:45
 I. COURSE OBJECTIVES: The student will try to learn: How to identify various engineering problems and reviewing available literature. The different techniques used to analyze the complex structural systems. Work on the solutions given and present solution by using his/her technique applying engineering principles. 								
Guidelines to be followed								
Mini Project will have mid semester presentation and end semester presentation. Mid semester presentation will include identification of the problem based on the literature review on the topic referring to latest literature available. End semester presentation should be done along with the report on identification of topic for the work and the methodology adopted involving scientific research, collection and analysis of data, determining relations highlighting in finite back a setuilation.								
Solutions highlighting individuals' contribution. Continuous assessment of Mini Project at Mid Sem and End Sem will be monitored by the Departmental committee.								

RESEARCH METHODOLOGY AND IPR

III Semester: CSE, ES, C	CAD/CAM, AE, ST, PEED							
Course Code	Category	Hours / Week			Credits	Ma	ximum	Marks
DUSC11	Coro	L	Т	Р	С	CIA	SEE	Total
blisell	Core	2	-	-	2	30	70	100
Contact Classes: 30	Tutorial Classes: Nil	Practical Classes: Nil Total Classes:30				ses:30		

I. COURSE OVERVIEW:

This course imparts research methodology and philosophy of intellectual property rights, including basic concepts employed in quantitative and qualitative research methods, Patents, Copyrights, and Trademarks. It provides the research framework, research methodology research design, and formulation hypothesis, sampling techniques, data analysis and report writing. It implies on research skills and intellectual property rights to encourage new creations, including technology, artwork, and inventions, that might increase economic growth.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The Knowledge on formulate the research problem, characteristics of a good research and interpretation of collected data.
- II. The importance of research ethics while preparing literature survey and writing thesis to achieve plagiarism free report.
- III. The intellectual property rights such as patent, trademark, geographical indications and copyright for the protection of their invention done.

III. COURSE OUTCOMES:

After successful completion of the course, students should be able to:

CO1	Interpret the technique of determining a research problem for a crucial part of the research study.	Remember
CO2	Examine the way of methods for avoiding plagiarism in research.	Apply
CO3	Apply the feasibility and practicality of research methodology for a proposed project.	Apply
CO4	Make use of the legal procedure and document for claiming patent of invention.	Understand
CO5	Identify different types of intellectual properties, the right of ownership, scope of protection to create and extract value from IP.	Understand
CO6	Defend the intellectual property rights throughout the world with the involvement of world intellectual property organization	Apply

IV. SYLLABUS:

MODULE – I: INTRODUCTION (9)

Meaning of research problem, Sources of research problem, Criteria Characteristics of a good research problem, Errors in selecting a research problem, Scope and objectives of research problem. Approaches of investigation of solutions for research problem, data collection, analysis, interpretation, Necessary instrumentations.

MODULE – II: RESEARCH ETHICS 9)

Effective literature studies approaches, analysis Plagiarism, Research ethics.

MODULE – III: RESEARCHPROPOSAL

Effective technical writing, how to write report, Paper Developing a Research Proposal.

Format of research proposal, presentation and assessment by iare view committee

MODULE – IV: PATENTING (9)

Nature of Intellectual Property: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, development. International Scenario: International cooperation on Intellectual Property. Procedure for grants of patents, Patenting under PCT.

MODULE – V: PATENT RIGHTS (9)

Patent Rights: Scope of Patent Rights. Licensing and transfer of technology. Patent information and databases. Geographical Indications. New Developments in IPR: Administration of Patent System. New developments in IPR; IPR of Biological Systems, Computer Software etc. Traditional knowledge Case Studies, IPR and IITs.

MISSILE AERODYNAMICS

III Semester: AE								
Course Code	Category Hours /Week Credits Maximum M							arks
DAECOC		L	Т	Р	С	CIA	SEE	Total
DALC20	Liecuve	3	-	-	3	30	70	100
Contact Classes:45	Tutorial Classes: Nil	Prac	tical	Classes:	Nil	Total	Classes	: 45

I.COURSE OVERVIEW:

The Missile Aerodynamics course is intended for the aerospace professional seeking expert instruction in the fundamentals of missile aerodynamics as applied to airframe design, analysis and test. The course provides students with a focused training experience in the aerodynamics of tactical missiles, ballistic missiles, launch vehicles, sounding rockets and projectiles. Participants will learn about vehicle 6-DOF aerodynamic force and moment models, airframe component airloads, atmospheric models, and mass property models. The course also includes a consideration of the unique aspects of projectile aerodynamics with particular emphasis on vehicle static, dynamic, and gyroscopic stability.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The fundamental aspects of aerodynamic characteristics and performance of various missiles.
- II. The lateral, directional stability, control and their maneuverability.
- III. The various design criteria and their modeling.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Classify various missiles and their control for the suitable selection in real world applications.	Understand
CO 2	Describe the aerodynamic characteristics of airframe components for different missile configurations	Understand
CO 3	Calculate the performance of various missile configurations for different operational envelops	Apply
CO 4	Compare the longitudinal stability of various missiles for forward and rear control	Analyze
CO 5	Choose the appropriate wing, body and tail configuration for better directional stability	Apply
CO 6	Apply the formation of induced roll and their control for improving lateral stability of missile	Apply

IV. SYLLABUS:

MODULE-I: INTRODUCTION (08)

Theory of bodies of revolution; Lift and moment of slender bodies of revolution; Planar W-B interference; Classes of missiles, types of design and control; Wing, canard, tail, tailless control; Dorsal, jet control, mono wing, triform, and cruciform.

MODULE-II: AERODYNAMIC CHARACTERISTICS OF AIRFRAME COMPONENTS& MISSILE PERFORMANCE (10)

Forebody:Conical,Ogival,hemi-spherical,etc.;Midsection:Boat-tail;Characteristicsofbodiesofrevolution; Aerodynamics of airfoil, aspect-ratio, wing plan form; Aerodynamic control: Wing, canard andtail; Missile performance: Introduction; Drag: Friction, pressure, interference, induced and boat tail drag;Boost glide trajectory: graphical and iterative method; Long range cruise trajectory; Maximum speed, rate of climb, time to climb, stall speed, maximum range; Long range ballistic trajectory: powered and unpowered flight and design consideration.

MODULE-III: LONGITUDINAL STABILITY AND CONTROL, MANEUVERING FLIGHT (10)

Introduction, two-degree of freedom analysis, complete missile aerodynamics: static stability margin, load factor capability for forward control and rear control.

Flat turn: Cruciform, triform, pull-ups; Relation between maneuverability and load factor; Stability margin.

MODULE-IV: DIRECTIONAL & LATERAL STABILITY AND CONTROL (09)

Introduction; Cruciform configuration: wing, body and tail contribution; Directional control; Introduction to lateral stability and control; Induced roll: Cruciform, lateral control cruciform, special design consideration, damping in roll, induced roll, mono wing, lateral control, mono wing.

MODULE-V: AIRLOADS: DESIGN CRITERIA (08)

Forward control; Rear control; Component air loads: Body, aero dynamic surfaces; Component load distribution: Body and lifting surfaces; Aero dynamic hinge moments and aerodynamic heating.

I. COURSE OVERVIEW:

Flight simulation and Control is the science that investigates the stability and control of aircrafts and all other flying vehicles. From the advent of the first flight by the Wright Brothers, it was observed that flight without knowledge of stability and control was not viable. Since then, several different concepts for controlling aircraft flight have been devised including control surfaces, deformable surfaces, morphing of wings etc. This course introduces some of these concepts and describes their operation, as well as the degree of stability that these devices can provide. Modern aircraft control is ensured through automatic control systems known as autopilot. Their role is to increase safety, facilitate the pilot's task and improve flight qualities. The course will introduce modern aircraft stability and control and discuss some of its objectives and applications

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The basics simulation of un-accelerated and accelerated level flight for climb and descend.
- II. The takeoff and landing performance and ground roll for different modes of aircraft.
- III. The basic controls and maneuver of in complex flight Path
- IV. The fundamental knowledge on static stability of aircraft in multiple directional motions with their relationship for critical applications in flight vehicles.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Recognize the aircraft components contributing to the stability of different aircraft models like Military, Civil and transport aircrafts.	Understand
CO 2	Identify stick fixed and stick free conditions for neutral points with an appropriate static margin, control force and CG limitation.	Apply
CO 3	Interpret the specific coupling between lateral and directional static stability of the aircraft and its influence on other motion of a typical aircraft.	Analyze
CO 4	Construct the mathematical model of aircraft motion in longitudinal, lateral and directional cases for establishing the status of the flight vehicles stability.	Apply
CO 5	Explain qualitatively about motion in three-dimensions, Euler angles and rates, full 6-DOF equations for rigid symmetrical aircraft, state space formulation, and solution in the time domain and flight simulation.	Analyze
CO 6	Apply the advances of flight dynamics and controls in design of modern airplane control system.	Apply

IV.SYLLABUS:

MODULE-I: INTRODUCTION (08)

Historical Perspective, the first 40 years of flight 1905–1945, analogue computing, 1945–1965, digital computing 1965–1985, the microelectronics revolution, 1985 present, the case for simulation, safety, financial benefits, training transfer, engineering flight simulation, the changing role of simulation, the organization of a flight simulator, equations of motion, aerodynamic model, engine model, data acquisition, gear model,

weather model, visual system, sound system, motion system, control loading, instrument displays, navigation systems, maintenance, the concept of real-time simulation, pilot cues, visual cueing, motion cueing, training versus simulation, examples of simulation, commercial flight training, military flight training, Ab initio flight training, land vehicle simulators, engineering flight simulators aptitude testing, computer-based training, maintenance training.

MODULE-II: PRINCIPLES OF MODELLING (10)

Modeling concepts, Newtonian mechanics, axes systems, differential equations, numerical integration, approximation methods, first order methods, higher order methods, real-time computing, data acquisition, data transmission, data acquisition, flight data, interpolation, distributed systems, a real-time protocol, problems in modeling,

MODULE-III: AIRCRAFT DYNAMICS (10)

Aero dynamic drag, propulsive forces, gravitational force, moments, static stability, aerodynamic moments, aero dynamic derivatives, axes systems, the body frame, stability axes, wind axes, inertial axes, transformation between axes.

Earth-centred earth-fixed frame, latitude and longitude, quaternions, equations of motion; Propulsion, piston engines, jet engines, the landing gear, the equations collected; The equations revisited: Long range navigation, coriolis acceleration.

MODULE-IV: SIMULATION OF FLIGHT CONTROL SYSTEMS (09)

The Laplace transform, simulation of transfer functions; Proportional-integral-derivative control systems, trimming, aircraft flight control systems, the turn coordinator and the yaw damper, the auto- throttle, vertical speed management, altitude hold, heading hold, localizer tracking, auto-land systems, flight management systems.

MODULE-V: MODEL VALIDATION AND VISUAL SYSTEMS (08)

Simulator qualification and approval, model validation methods, cockpit geometry, open-loop tests, closed-loop tests, latency, performance analysis, longitudinal dynamics, lateral dynamics, model validation in perspective; Visual systems: Background, the visual system pipeline, graphics operations, real-time image generation, a rudimentary real time wire frame image generation system, an open GL real-time textured image generation system, an open scene graph image generation system, visual database management, projection systems, problems in visual systems.

AIRPORT	PLANNING	AND (DPERATION
---------	----------	-------	------------------

III Semester: AE								
Course Code	Category	Hou	rs / V	Veek	Credits	Maxi	mum Ma	ırks
DA E COO		L	Т	Р	С	CIA	SEE	Total
DALC20	Liecuve	3	-	-	3	30	70	100
Contact Classes:45	Tutorial Classes: Nil	Pra	ctica	l Class	es: Nil	Total	Classes	: 45

I. COURSE OVERVIEW:

The aim is to understanding of relevant international and national regulations and the ability to explain their effects on airport business, planning, design, operations and safety management decisions. A critical awareness of the key issues that affect users of airport facilities. And to identify, analyse and design solutions in order to address a given research problem within the context of airport planning and management, having regard to regulatory constraints and commercial and environmental imperatives.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The various acts of legislation that have influenced the development and operation of airports since the early days of civil aviation.
- II. The knowledge on various facilities located on an airports and types of airport runways airfield.
- III. The facilities within an airport terminal that facilitate the transfer of passengers and baggage to and from aircraft.
- IV. The technologies used to modernize air traffic control, hierarchical air traffic control management structure.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Identify the airport management systems by using modern tools for assessing airport performance and safety.	Understand
CO 2	Develop the ground handling system by using organizational and managerial skills for the efficient flow of passengers and goods in an airport.	Apply
CO 3	Model the philosophies of terminal management of airline passenger services by using Hubbind's theory for ascertaining optimum flow pattern.	Understand
CO 4	Organize the cargo handling, operations, and marketing by using modern cargo terminal design concepts for expediting the movement in the airport terminal.	Understand
CO 5	Make use of airport technical services by the passengers and stake holders for the effective utilization of facilities.	Apply
CO 6	Examine the operational and administrative performance of an airport using the management techniques for effective utilization of human resources.	Understand

IV. SYLLABUS:

MODULE-I: THE AIRPORT AS AN OPERATIONAL SYSTEM (08)

The airport as a system; National airport systems; The function of the Airport; Centralized and decentralized passenger terminal systems; The complexity of the airport operation; Management and operational structures; Airport influences on aircraft performance characteristics: Aircraft departure performance; Approach and landing performance; Safety considerations; Automatic landing; Operations in inclement weather; Specific implications of the Airbus A380; Operational Readiness: Aerodrome certification; Operating constraints; Operational areas; Airfield Inspections; Maintaining readiness.

MODULE-II: GROUND HANDLING AND BAGGAGE HANDLING (10)

Ground handling: Passenger handling; Ramp handling; Aircraft ramp servicing; Ramplay out; Departure control; Division of ground handling responsibilities; Control of ground handling efficiency; Baggage handling: Context, history and trends; Baggage handling processes; Equipment, systems and technologies, process and system design drivers; Organization; Management and performance metrics.

MODULE-III: PASSENGER TERMINAL AND CARGO OPERATIONS (10)

Passenger terminal operations: Functions of the passenger terminal; Terminal functions; Philosophies of terminal management; Direct passenger services; Airline related passenger services; Airline related operational functions; Government requirements; Non-passenger related airportau thority functions; processing very important persons; Passenger information systems.

Space components and adjacencies. Aids to circulation; Hubbind considerations; Cargo operations: The cargo market; Expediting the movement; Flow through the terminal; unit load devices; Handling within the terminal; Cargo apron operation; Facilitation; Examples of modern cargo terminal design and operation; Cargo operations by the integrated carriers.

MODULE-IV: AIRPORT TECHNICAL SERVICES AND ACCESS (09)

Airport technical services: The scope of technical services; Safety management system; Air traffic control; Telecommunications; Meteorology; Aeronautical information; Airport access: Access as part of airport system; access users and modal choice; access interaction with passenger; access modes; In town and other off; airport terminals; Factors affecting access; mode choice.

MODULE-V: OPERATIONAL ADMINISTRATION AND PERFORMANCE (08)

Operational administration and performance: Strategic context; Tactical approach to administration of airport operations; Managing operational performance; Key success factors for high; performance; airport operations control centers: The concept of airport operations; airport operations control system; the airport Operations consideration; airport performance monitoring; design and equipment considerations; organizational and human resources considerations; leading AOCCSs; best practices in airport operations.

AEROSPACE OPTIMIZATION TECHNIQUES

III Semester: AE								
Course Code	Category	Hours /Week		Hours /Week Credits		Maximum Marks		ırks
		L	Т	Р	С	CIA	SEE	Total
DAEC29	Liecuve	3	-	-	3	30	70	100
ContactClasses:45	Tutorial Classes: Nil	Practical Classes: N			ses: Nil	Tota	Classes	:45

I. COURSE OVERVIEW:

This course emphasizes on application of various mathematical techniques for obtaining the best outputs (minima or maxima) for an engineering problem. Enumerate the fundamental knowledge of Linear Programming and Dynamic Programming problems along with classical optimization techniques and numerical methods of optimization. Explain Integer programming techniques and apply different optimization techniques to solve various models arising from engineering areas.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The theory of optimization methods and algorithms developed for solving various types of optimization problems.
- II. Research interest in applying optimization techniques in problems of Engineering and Technology.
- III. The mathematical results and numerical techniques of optimization theory to concrete Engineering problems.

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Apply the concept of optimization dealing with singe variables for deterring the best output to a given engineering problem.	Apply
CO 2	Analyze the behavior of nonlinear systems using Local minima and Global minima for designing the system for better outputs.	Analyze
CO 3	Apply the numerical methods to a nonlinear problem for determining the solutions in absence for analytical methods.	Apply
CO 4	Apply the Gradient methods to an engineering problem involving multiple variables for designing a system with optimized performance.	Apply
CO 5	Understanding the Multivariable constrained problems involved in engineering systems for better designs	Understand
CO 6	Illustrate the constraints involved in engineering systems for optimized solutions.	Apply

IV. SYLLABUS:

MODULE-I: INTRODUCTION TO OPTIMIZATION (09)

Introduction: Optimal problem formulation, design variables, constraints, objective function, variable bounds; engineering optimization problems: Classification and Some examples (just theory and discussion): truss structure, ammonia structure, transit schedule and car suspension.

MODULE-II: SINGLE VARIABLE OPTIMIZATION (09)

Single variable non-linear optimization problems: Local minimum global minimum and inflection point, necessary and sufficient conditions theorems, some problems based on this; Numerical methods: Exhaustive search methods, Fibonacci method, golden section method and comparison, interpolation methods: quadratic.

MODULE-III: MULTI VARIABLE UNCONSTRAINED OPTIMIZATION (09)

Multivariable unconstrained non-linear optimization problems: Numerical methods direct search methods:

Univariate method, Pattern Search methods: Powell, Hook-Jeeve's, Rosen Brock's search and Simplex methods, multivariable unconstrained non-linear optimization problems.

Gradient methods: Gradient of a function, importance, gradient direction search based methods: Steepest descent/ascent method, conjugate gradient method and variable meteric method.

MODULE-IV: MULTI VARIABLE CONSTRAINED OPTIMIZATION (09)

Multivariable constrained non-linear optimization problems classical optimization techniques: Constraints equations, Lagrangian method, inequalities-Kuhn-Tucker necessary and sufficient conditions, quadratic problem, Statement, Wolfe's and Beale's methods.

MODULE-V: GEOMETRIC AND INTEGER PROGRAMMING (09)

Geometric programming: polynomials, arithmetic, geometric inequality, unconstrained G.P, constrained G.P(\leq type only) integer Programming; Introduction, formulation, Gomory cutting plane algorithm, branch and bound method.

ELEMENTS OF AEROSPACE ENGINEERING

III Semester: COMMON FOR ALL BRANCHES										
Course Code	Category	Hours /Week			Hours /Week Credits Ma			aximum Marks		
DAECOA		L	Т	Р	С	CIA	SEE	Total		
DAECJU	Liecuve	3	-	-	3	30	70	100		
Contact Classes: 45	Tutorial Classes: Nil	Practical Class			ses: Nil	То	tal Classe	s: 45		

I. COURSE OVERVIEW:

Aeronautical engineering is the specialized branch of engineering and study of science that deals with design, construction, maintenance of various aircrafts and their components. Candidates who have an inclination towards airplanes and their mechanisms can opt to study aeronautical engineering.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The Historical evaluation of Airplanes
- II. The different component systems and functions
- III. The various types of power plants used in aircrafts

III. COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Learn the history of aircraft & developments over the years			
CO 2	Understand ability to identify the types & classifications of components and control systems	Understand		
CO 3	Understand the basic concepts of flight & Physical properties of Atmosphere	Understand		
CO 4	Understand the different Newtonian law and its application in aerospace domain	Understand		
CO 5	Explain the Different types of Engines and principles of Rocket	Understand		
CO 6	Understand ability to differentiate the types of fuselage and constructions	Understand		

IV. COURSE SYLLABUS:

MODULE-I: HISTORY OF FLIGHT (07)

Balloon flight-ornithopers-Early Airplanes by Wright Brothers, biplanes and monoplanes, Developments in aerodynamics, materials, structures and propulsion over the years.

MODULE-II: AIRCRAFT CONFIGURATIONS AND ITS CONTROLS (08)

Different types of flight vehicles, classifications-Components of an airplane and their functions-Conventional control, powered control- Basic instruments for flying-Typical systems for control actuation.

MODULE-III: BASICS OF AERODYNAMICS (06)

Physical Properties and structures of the Atmosphere, Temperature, pressure and altitude relationships, Newton's Law of Motions applied to Aeronautics-Evolution of lift, drag and moment. Aerofoils, Mach number, Maneuvers.

MODULE-IV: BASICS OF PROPULSION (06)

Basic ideas about piston, turboprop and jet engines – use of propeller and jets for thrust production-Comparative merits, Principle of operation of rocket, types of rocket and typical applications, Exploration into space.

MODULE-V: BASICS OF AIRCRAFT STRUCTURES (06)

General types of construction, Monocoque, semi-monocoque and geodesic constructions, typical wing and fuselage structure. Metallic and non-metallic materials. Use of Aluminium alloy, titanium, stainless steel and composite materials. Stresses and strains-Hooke's law- stress-strain diagrams-elastic constants-Factor of Safety.

DATA ANALYTICS

III Semester: COMMON FOR ALL BRANCHES										
Course Code	Category	Hours / Week			Credits	Maximum Marks				
DCCC20		L	Т	Р	С	CIA	SEE	Total		
BCSC30	Elective	3	-	-	3	its Ma CIA 30	70	100		
Contact Classes: 45	Tutorial Classes: Nil	Practical Classes: Ni			ses: Nil	Т	otal Class	ses: 45		

I. COURSE OVERVIEW:

This course covers the fundamentals of data analysis, such as data gathering or data mining .this course covers concepts of data analysis, regression analysis, organization structures, forecasting techniques and decision analysis. The *data analytics* tools help in the data mining processes from loading to transformation, aggregation, automated parameter, and process optimization.

II. COURSE OBJECTIVES

The students will try to learn:

- I. The role of business analytics within an organization.
- II. The relationships between the underlying business processes of an organization.
- III. To gain an understanding of how managers use business analytics to formulate

III COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO1	Analyze data using statistical and business analytics technology	Analyze
CO2	Solve business problems and to support managerial decision making	Apply
CO3	Choose business decision Strategies with the without outcome probabilities	Apply
CO4	Perform statistical analysis on variety of data	Apply
CO5	Experiment Data using Business Analytics Technology	Apply

IV. COURSE SYLLABUS: MODULE – I: BUSINESS ANALYTICS (09)

Business analytics: Overview of Business analytics, Scope of Business analytics, Business Analytics Process, Relationship of Business Analytics Process and organization, competitive advantages of Business Analytics. Statistical Tools: Statistical Notation, Descriptive Statistical methods, Review of probability distribution and data modeling, sampling and estimation methods overview.

MODULE – II: REGRESSION ANALYSIS (09)

Trendiness and Regression Analysis: Modeling Relationships and Trends in Data, simple Linear Regression. Important Resources, Business Analytics Personnel, Data and models for Business analytics, problem solving, Visualizing and Exploring Data, Business Analytics Technology.

MODULE – III: ORGANIZATION STRUCTURES (09)

Organization Structures of Business analytics, Team management, Management Issues, Designing Information Policy, Outsourcing, Ensuring Data Quality, Measuring contribution of Business analytics, Managing Changes.

Descriptive Analytics, predictive analytics, predicative Modeling, Predictive analytics analysis, Data Mining, Data Mining Methodologies, Prescriptive analytics and its step in the business analytics Process, Prescriptive Modeling, nonlinear Optimization.

MODULE – IV: FORCASTING TECHNIQUES (09)

Forecasting Techniques: Qualitative and Judgmental Forecasting, Statistical Forecasting Models, Forecasting Models for Stationary Time Series, Forecasting Models for Time Series with a Linear Trend, Forecasting Time Series with Seasonality, Regression Forecasting with Casual Variables, Selecting Appropriate Forecasting Models.

Monte Carlo Simulation and Risk Analysis: Monte Carle Simulation Using Analytic Solver Platform, New-Product Development Model, Newsvendor Model, Overbooking Model, Cash Budget Model.

MODULE - V: DECISION ANALYSIS (09)

Decision Analysis: Formulating Decision Problems, Decision Strategies with the without Outcome Probabilities, Decision Trees, The Value of Information, Utility and Decision Making. Recent Trends in: Embedded and collaborative business intelligence, Visual data recovery, Data Storytelling and Data journalism.

REAL TIME OPERATING SYSTEMS

III Semester: COMMON	FOR ALL BRANCHES							
Course Code	Category	Hours / Week			Credits	Max	kimum M	arks
BESC30	Floating	L	Т	Р	С	CIA	SEE	Total
DESCOV	Liecuve	3	-	-	3	30	70	100
Contact Classes: 45	Tutorial Classes: Nil	Practical Classes: Nil			es: Nil	Total Classes:45		

I. COURSE OVERVIEW:

This course is to introduce students with the basic concepts and approaches in the design and analysis of real-time operating systems. It covers design considerations of real time operating systems, task scheduling, threads, multitasking, task communication and synchronization. Applications of the course include real time operating systems in image processing, fault tolerant applications and control systems.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The concepts of operating systems and principles of real time operating system, implementation aspects of real time concepts in embedded systems.
- II. The design of real time operating system by using the concepts of Timers, I/O subsystem and Memory management units.
- III. Software development process and tools like Vxworks and muCOS for real timeoperating system applications.

III. COURSE OUTCOMES:

After successful completion of the course, students should be able to:

CO1	Recall real time operating system to provide resource managementand synchronization for communication systems.	Understand
CO2	Compare soft real-time operating system and hard real-timeoperating systems for the priority based task scheduling.	Analyze
CO 3	Outline the components of real time operating systems for the designof reliable embedded system.	Understand
CO 4	Analyze finite state machine for the task scheduling and execution inkernel models.	Analyze
CO 5	Develop a semaphore token for the execution of one or more threads in mutual exclusion.	Create
CO 6	Interpret message queue in asynchronous communications protocolfor send and receive messages simultaneously.	Understand

IV. SYLLABUS:

MODULE - I: REAL TIME OPERATING SYSTEM PRINCIPLES (10)

History of operating systems, defining RTOS, classification of real-time systems, The scheduler, objects, services and key characteristics of RTOS, Tasks: Defining a task, task states and scheduling, typical task operations, typical task structure.

MODULE - II: REAL TIME KERNEL OBJECTS (09)

Semaphores: Defining semaphores, typical semaphore operations, typical semaphore use; Message Queues: Defining message queues, message queue states, message queue content, message queue storage, typical message queue operations; Typical message queue use other kernel objects: Pipes, event registers, signals, condition variables.

MODULE - III: RTOS DESIGN CONSIDERATIONS (08)

Timer and Timer Services: Real-time clocks and system clocks, programmable interval timers, timer interrupt service routines, model for implementing the soft-timer handling facility, timing wheels.

I/O sub system: Basic I/O concepts, the I/O sub system; Memory management: Dynamic memory allocation, fixed-size memory management, blocking vs. Non-blocking memory functions, hardware memory management units.

MODULE - IV: TASKS COMMUNICATION AND SYNCHRONIZATION (08)

Synchronization and Communication: Synchronization, communication, resource synchronization methods, common practical design patterns; common design problems: Resource classification, deadlocks, priority inversion.

MODULE - V: RTOS APPLICATION DOMAINS (10)

Comparison and study of RTOS: Vxworks and COS, Case studies: RTOS for image processing, embedded RTOS for voice over IP, RTOS for fault tolerant applications, RTOS for control systems.

WASTE TO ENERGY

III Semester: COMMON FOR ALL BRANCHES									
Course Code	Category	Hours / Week			Credits	Μ	Maximum Marks		
	Corre	L	Т	Р	С	CIA	SEE	Total	
DFSCJU	Core	3	0	0	3	30	70	100	
Contact Classes: 45	Total Tutorials: Nil	Total Practical Classes: Ni				T	otal Cla	asses: 45	

I. COURSE OVERVIEW:

The course is designed to create environmental awareness and consciousness among the present generation to become environmental responsible citizens. The course will discuss on the municipal solid waste composition, characteristics and to improve the methods to minimize municipal solid waste generation. This course deals with methods of disposal of solid waste by thermal biochemical processes and production of energy from different types of waste sand to know the environmental impacts of all types of municipal waste.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The principles of solid waste management in reducing and eliminating dangerous impacts of waste materials on human health and the environment to contribute economic development and superior quality of life.
- II. The insight of the design and operations of a municipal solid waste landfill by collection, transfer and transportation of municipal solid waste for the final disposal.
- III. The insight of the design and operations of a municipal solid waste landfill by collection, transfer and transportation of municipal solid waste for the final disposal.

III COURSE OUTCOMES:

After successful completion of the course, students will be able to:

CO 1	Identify the different sources and types of solid waste by the properties of municipal solid waste for segregation and collection of waste.	Apply
CO 2	Illustrate the classification, preliminary design considerations of landfill and methods of landfill disposal of solid to control greenhouse gases.	Understand
CO 3	Understand the Composition, characteristics of leachate to control the emission of gases by monitoring the movement of landfill leachate.	Understand
CO 4	Outline the Biochemical conversion of biomass for energy generation by anaerobic digestion of solid waste.	Understand
CO 5	Apply the knowledge in planning and operations of waste to Energy plants by following legal legislation related to solid waste management.	Apply
CO 6	Illustrate the thermo-chemical conversion of Biogas by using Gasification process for energy generation.	Understand

IV. SYLLABUS

MODULE –I: WASTE SOURCES & CHARACTERIZATION (09)

Waste production in different sectors such as domestic, industrial, agriculture, postconsumer, waste etc. Classification of waste – agro based, forest residues, domestic waste, industrial waste (hazardous and non-hazardous). Characterization of waste for energy utilization. Waste Selection criteria.

MODULE -II: TECHNOLOGIES FOR WASTE TO ENERGY (09)

Biochemical Conversion – Energy production from organic waste through anaerobic digestion and fermentation. Thermo-chemical Conversion – Combustion, Incineration and heat recovery, Pyrolysis, Gasification; Plasma Arc Technology and other newer technologies.

MODULE –III: WASTE TO ENERGY & ENVIRONMENTAL IMPLICATIONS (09)

Environmental standards for Waste to Energy Plant operations and gas clean-up. Savings on non-renewable fuel resources.

Carbon Credits: Carbon foot calculations and carbon credits transfer mechanisms.

MODULE -- IV: THERMO-CHEMICAL CONVERSION (09)

Biogas production, land fill gas generation and utilization, thermo-chemical conversion: Sources of energy generation, gasification of waste using gasifies briquetting, utilization and advantages of briquetting, environmental benefits of bio-chemical and thermo- chemical conversion, comparison of various thermo-chemical conversion.

MODULE –V: E- CENTRALIZED AND DECENTRALIZED WASTE TO ENERGY PLANTS (09)

Waste activities – collection, segregation, transportation and storage requirements. Location and Siting of 'Waste to Energy' plants. Industry Specific Applications – In-house use – sugar, distillery, pharmaceuticals, Pulp and paper, refinery and petrochemical industry and any other industry. Centralized and Decentralized Energy production, distribution and use. Comparison of Centralized and decentralized systems and its operations.

OPERATIONS RESEARCH

III Semester: COMMON FOR ALL BRANCHES										
Course Code	Category	Hours / Week			Credits	Maximum Marks				
B CCC20		L	Т	Р	С	CIA	SEE	Total		
BUUUSU	Liective	3	-	-	3	30	70	100		
Contact Classes: 45	Tutorials Classes: Nil	Practical Classes: Nil				Tota	l Classes	: 45		

I. COURSE OVERVIEW:

Operations Research (OR) is a discipline that helps to make better decisions in complex scenarios by the application of a set of advanced analytical methods. It couples theories, results and theorems of mathematics, statistics and probability with its own theories and algorithms for problem solving. Applications of OR techniques spread over various fields in engineering, management and public systems. This course includes the following topics : Linear Programming, Transportation problems, Assignment and Theory of games problems. Advanced topics on waiting line and simulation.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The description, characteristics of operation research and mathematical model of real time problem for optimization.
- II. Establish the problem formulation by using linear, dynamic programming, game theory and queuing models.
- III. Apply stochastic models for discrete and continuous variables to control inventory.
- IV. Visualize the computer-based manufacturing simulation models.

III. COURSE OUTCOMES:

After successful completion of the course, students should be able to:

CO1	Recall the basics of operation research	Remember
CO2	Explain the characteristics and scope of OR	Understand
CO3	Select optimal problems solving techniques for a given problem using LP	Apply
CO4	Solve transportation, travelling sales man and Assignment problems	Apply
CO5	Demonstrate and solve simple models of Game theory.	Understand
CO6	Choose appropriate simulation model for practical application	Apply

IV. COURSE SYLLABUS:

MODULE -I: INTRODUCTION AND ALLOCATION (09)

Development, definition, characteristics and phases, types of operation research models, applications; Allocation: linear programming, problem formulation, graphical solution, simplex method, artificial variables techniques, two–phase method, big-M method.

MODULE -II: TRANSPORTATION AND ASSIGNMENT PROBLEM (09)

Transportation problem: Formulation, optimal solution, unbalanced transportation problem, degeneracy; Assignment problem, formulation, optimal solution, variants of assignment problem, traveling salesman problem.

MODULE -III: SEQUENCING AND REPLACEMENT (09)

Sequencing: Introduction, flow, shop sequencing, n jobs through two machines, n jobs through three machines, job shop sequencing, two jobs through "m" machines.

Replacement: Introduction: Replacement of items that deteriorate with time, when money value is not counted and counted, replacement of items that fail completely, group replacement.

MODULE -IV: THEORY OF GAMES AND INVENTORY (09)

Theory Of Games: Introduction, minimax (maximin) criterion and optimal strategy, solution of games with saddle points, rectangular games without saddle points, dominance principle, mx2 and 2xn games, graphical method; Inventory: Introduction, single item, deterministic models, purchase inventory models with one price break and multiple price breaks, shortages are not allowed, stochastic models, demand may be discrete variable or continuous variable, instantaneous production, instantaneous demand and continuous demand and no set up cost, single period model.

MODULE -V: WAITING LINES AND SIMULATION (09)

Waiting Lines: Introduction, single channel, poisson arrivals, exponential service times, with infinite population and finite population models, multichannel, poisson arrivals, exponential service times with infinite population single channel Poisson arrivals; Simulation: Definition, types of simulation models, phases of simulation, applications of simulation, inventory and queuing problems, advantages and disadvantages, brief Introduction of simulation languages.

PROJECT MANAGEMENT AND PLANNING

III Semester: COMMON FOR ALL BRANCHES									
Course Code	Category	Hours / Week		Hours / Week		Credits	Maximum Marks		arks
DGTC20		L	Т	Р	С	CIA	SEE	Total	
B51C30	Elective	3	0	0	3	Ma CIA 30 To	70	100	
Contact Classes: 45	Tutorial Classes: Nil	Practical Classes: Nil				To	tal Classes	: 45	

I. COURSE OVERVIEW:

Construction project planning and administration the art of directing and coordinating human and material resources throughout the life of a project by using modern management techniques to achieve predetermined objectives of scope, cost, time, quality and participation satisfaction. Teaching these requirements by the designed course content.

II. COURSE OBJECTIVES:

The student will try to learn:

- I. The construction project schedules, documents for planning and management of construction processes.
- II. The various types of planning tools like bar chart, CPM networks and PERT analysis
- III. The different methods of project delivery, roles and responsibilities of all constituencies involved in the design and construction process.
- IV. The various types of construction contracts, their legal aspects and provisions.

III. COURSE OUTCOMES:

After successful completion of the course, students should be able to:

CO1	Apply the knowledge of management functions like planning, scheduling, executing and controlling of projects for completion of project within given time.	Apply
CO2	Apply the knowledge of network analysis of construction activities and optimize resources by using bar chart, CPM networks.	Apply
CO3	Apply the knowledge of modern construction practices and techniques to achieve quality of work in projects	Apply
CO4	Identify the resource planning and management in construction to improve the performance management and organizational effectiveness.	Apply
CO5	Understand the computer based models adopted in construction industry for optimization of cost and schedule of a project	Understand
CO6	Identify the different types of contracts in construction, arbitration, legal aspects and provision to safe guard the labor and human rights.	Apply

IV. SYLLABUS

MODULE –I: PROJECT MANAGEMENT (09)

Introduction, Project planning, scheduling, controlling, Role of decision in project management, Project management Process and role of Project Manager.

MODULE -- II: PROJECT PLANNING TOOLS (09)

Bar Charts and Milestones Chart: Introduction, Development of bar chart, Short comings and remedial measures, Milestone charts.CPM & PERT: Elements of network, Time estimates, frequency distribution, mean, variance and standard deviation, probability distribution. Network Analysis: Slack, Float, Critical path, crashing of activity.

MODULE -III: COST ANALYSIS & UPDATING (09)

Introduction, Projects cost: Direct cost, Indirect cost, slope of direct cost curve, total project cost and optimum duration, cost optimization.

Project Updating: Introduction, updating process, data required for updating, steps in process updating.

MODULE –IV: RISK ANALYSIS AND RESOURCE ALLOCATION (09)

Certainty, risk and uncertainty, risk management, identification and nature of construction risks, contractual allocation of risk, types of risks, minimizing risks and mitigating losses, use of expected values, utility in investment decisions, decision trees, sensitivity analysis. Resource Allocation: Resource usage profiles, Resource smoothing and levelling.

MODULE -V: CONSTRUCTION EQUIPMENT (09)

Types of compaction Equipment's, Types of Excavation and digging Equipment's, Types of hoisting equipment's, Types of Material handling Equipment's and Types of heavy earth moving equipment's.

V. TEXT BOOKS:

- 1. B. C. Punmia, K.K. Khandelwal, Project Planning and Control with PERT and CPM, Laxmi Publications, 2005.
- 2. Sharma S.C. "Construction Equipment and Management, Khanna Publishers, New Delhi, 2002.

ENGLISH FOR RESEARCH PAPER WRITING

Course Code	Category	Hours / Week		Hours / Week		Hours / Week		Hours / Week		Hours / Week		Hours / Week		Hours / Week		Hours / Week		Hours / Week		Hours / Week Cree		Ma	ximum M	larks
BHSC01	Audit	L	Т	Р	С	CIA	SEE	Total																
		2	-	-	0	30	70	100																
Contact Classes: 24	Tutorial Classes: Nil	Practical Classes: Nil			sses: Nil	То	tal Classe	s: 24																

I. COURSE OVERVIEW:

In this course, students will be equipped with the necessary tools to effectively communicate their research findings in a scholarly manner. They will develop the ability to write clear, concise, and well-structured research papers that adhere to academic standards. These skills will not only benefit them in their academic pursuits but also in their future professional careers as researchers, scholars, and professionals in various fields

II. COURSE OBJECTIVES:

The students will try to learn:

- I. How to improve the writing skills and level of readability.
- II. The methodology that what to write in each section
- III. The skills needed when writing a Title Ensure the good quality of paper at very first-time submission.

III. COURSE OUTCOMES:

After successful completion of the course, students should be able to:

CO 1	Interpret the technique of determining a research problem for a crucial part of the research study	Apply
CO 2	Examine the way of methods for avoiding plagiarism in research	Understand
CO 3	Apply the feasibility and practicality of research methodology for a proposed project.	Apply
CO 4	Make use of the legal procedure and document for claiming patent of invention.	Apply
CO 5	Identify different types of intellectual properties, the right of ownership, scope of protection to create and extract value from IP	Apply

IV. SYLLABUS:

MODULE - I: PLANNING AND PREPARATION (04)

Planning and Preparation, Word Order, breaking up long sentences, Structuring Paragraphs and Sentences, Being Concise and Removing Redundancy, Avoiding Ambiguity and Vagueness

MODULE – II: ABSTRACT (05)

Clarifying Who Did What, Highlighting Your Findings, Hedging and Criticizing, Paraphrasing and Plagiarism, Sections of a Paper, Abstracts. Introduction

MODULE - III: DISCUSSION AND CONCLUSIONS (05)

Review of the Literature, Methods, Results, Discussion, Conclusions, The Final Check.

Key skills are needed when writing a Title, key skills are needed when writing an Abstract, key skills are needed when writing an Introduction, skills needed when writing a Review of the Literature.

MODULE - IV: DISCUSSION AND CONCLUSIONS (05)

Skills are needed when writing the Methods, skills needed when writing the Results, skills are needed when writing the Discussion, skills are needed when writing the Conclusions.

MODULE – V: QUALITY AND TIME MAINTENANCE (05) Useful phrases, how to ensure paper is as good as it could possibly be the first- time submission.

DISASTER MANAGEMENT

Course Code	Category	Hours / Week		Hours / Week Credit		Ma	ximum M	larks
BHSC02	Audit	L	Т	Р	С	CIA	SEE	Total
		2	-	-	0	30	70	100
Contact Classes: 24	Tutorial Classes: Nil	Practical Classes			sses: Nil	То	tal Classe	s: 24

I. COURSE OVERVIEW:

In the course on disaster management, students will explore a range of important topics and gain valuable knowledge and skills to effectively address and mitigate the impact of disasters and covers areas like Repercussions of Disasters and Hazards, Disaster-Prone Areas in India, Risk Assessment and Disaster Mitigation

II. COURSE OBJECTIVES:

The students will try to learn:

- I. How to demonstrate a critical understanding of key concepts in disaster risk reduction and humanitarian response.
- II. How critically evaluate disaster risk reduction and humanitarian response policy and practice from multiple perspectives.
- III. The understanding of standards of humanitarian response and practical relevance in specific types of disasters and conflict situations.
- IV. The strengths and weaknesses of disaster management approaches, planning and programming in different countries, particularly their home country or the countries they work in.

III. COURSE OUTCOMES:

After successful completion of the course, students should be able to:

	Understand to describe the basic types of Environmental hazards and disasters.	Understand
CO 1	Understand how to react effectively to natural, manmade, and technological threats.	
CO^{2}	Understand how to react effectively to natural, manmade, and planetary	Understand
02	hazards	
CO^{2}	Explore the history of the field and comprehend how past events are earthquake,	Analyze
005	landslides, and volcanic hazards.	
CO_{4}	Describe the basic concepts of the emergency management cycle mitigation,	Understand
CO 4	preparedness, response, and recovery	
CO 5	Recognizes the stakeholders in disaster management system, their jurisdiction and	Remember
05	responsibilities	
TTT OT		

IV. SYLLABUS

MODULE – I: INTRODUCTION (04)

Disaster: Definition, Factors and Significance; Difference Between Hazard and Disaster; Natural and Manmade Disasters: Difference, Nature, Types And Magnitude.

MODULE – II: REPERCUSSIONS OF DISASTERS AND HAZARDS (05)

Economic Damage, Loss Of Human And Animal Life, Destruction Of Ecosystem. Natural Disasters: Earthquakes, Volcanisms, Cyclones, Tsunamis, Floods, Droughts and Famines, Landslides and Avalanches, Man-made disaster: Nuclear Reactor Meltdown, Industrial Accidents, Oil Slicks and Spills, Outbreaks Of Disease And Epidemics, War And Conflicts.

MODULE – III: DISASTER PRONE AREAS IN INDIA (05)

Study Of Seismic Zones; Areas Prone To Floods And Droughts, Landslides And Avalanches; Areas Prone To Cyclonic And Coastal Hazards With Special Reference To Tsunami; Post-Disaster Diseases And Epidemics.

MODULE - IV: DISASTER PREPAREDNESS AND MANAGEMENT (05)

Preparedness: Monitoring of Phenomena Triggering A Disaster Or Hazard; Evaluation Of Risk: Application Of Remote Sensing, Data From Meteorological And Other Agencies, Media Reports: Governmental And Community Preparedness.

MODULE – IV: RISK ASSESSMENT & DISASTER MITIGATION (05)

Disaster Risk: Concept And Elements, Disaster Risk Reduction, Global And National Disaster Risk Situation. Techniques Of Risk Assessment, Global Co-Operation In Risk Assessment And Warning, People's Participation In Risk Assessment. Strategies for Survival. Disaster Mitigation: Meaning, Concept And Strategies Of Disaster Mitigation, Emerging Trends In Mitigation. Structural Mitigation And Non-Structural Mitigation, Programs Of Disaster Mitigation In India.

SANSKRIT FOR TECHNICAL KNOWLEDGE

Course Code	Category	Hours / Week		Hours / Week Credits		Credits	Ma	ximum M	larks
BHSC03	Audit	L	Т	Р	С	CIA	SEE	Total	
		2	-	-	0	30	70	100	
Contact Classes: 24	Tutorial Classes: Nil	Practical Classes: N			sses: Nil	То	tal Classe	s: 24	

I. COURSE OVERVIEW:

In this course, Studying Sanskrit enhances students' analytical thinking and problem-solving abilities. The intricate grammar and logical structure of Sanskrit nurture their analytical skills, enabling them to dissect complex concepts and extract profound insights. This heightened analytical thinking can be applied across different technical disciplines, fostering innovative solutions to contemporary challenges

II. COURSE OBJECTIVES:

The students will try to learn:

- I. A working knowledge in illustrious Sanskrit, the scientific language in the world.
- II. The Sanskrit to improve brain functioning.
- III. The Sanskrit language to develop the logic in mathematics, science & other subjects enhancing the memory power.
- IV. The engineering scholars equipped with Sanskrit will be able to explore the huge knowledge from ancient literature.

III. COURSE OUTCOMES:

After successful completion of the course, students should be able to

CO 1	Understand the basic Sanskrit grammar	Understand
CO 2	Formulate simple sentences	Apply
CO 3	Apply order and roots	Apply
CO 4	Understand Ancient Sanskrit literature about science & technology	Understand
CO 5	Develop logical thinking being a logical language in technical concepts	Apply

IV. SYLLUBUS:

MODULE – I: INTRODUCTION (06)

Alphabets in Sanskrit, Past/Present/Future Tense.

MODULE – II: SENTENCES (04) Simple Sentences

MODULE – III: ROOTS (04) Order, Introduction of roots

MODULE – IV: SANSKRIT LITERATURE (04)

Technical information about Sanskrit Literature

MODULE – V: TECHNICAL CONCEPTS (06)

Technical concepts of Engineering-Electrical, Mechanical, Architecture, Mathematics

V. TEXT BOOKS:

1. Suresh Soni, "India's Glorious Scientific Tradition", Ocean books (P) Ltd., New Delhi.

VI. REFERENCE BOOKS:

VALUE EDUCATION

Course Code	Category	Hours / Week		Hours / Week Credits		Credits	Ma	ximum l	Marks
DUSCOA	Audit	L	Т	Р	С	CIA	SEE	Total	
DH5C04		2	-	-	0	30	70	100	
Contact Classes: 24	Tutorial Classes: Nil	Practical Classes: Nil			To	tal Class	es: 24		

I. COURSE OVERVIEW:

In the course on value education, students emerge with a heightened sense of self-awareness, a strong moral foundation, and the skills necessary for personal and professional success. They are equipped with the knowledge and tools to navigate ethical challenges, contribute positively to society, and lead a purposeful and fulfilling life based on their core values and principles.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The value of education and self- development.
- II. Imbibe good values in students.
- III. The importance of character.

III. COURSE OUTCOMES:

After successful completion of the course, students should be able to:

CO 1	Understand the significance of ethical human conduct and self-development	Understand
CO 2	Adopt value-based living and holistic technologies to save nature	Apply
CO 3	Inculcate positive thinking, dignity of labor and religious tolerance	Apply
CO 4	Develop the overall Character and Competence through self-management	Analyze
CO 5	Practice Self-control. Honesty through Studying effectively all religious messages	Apply
TTI OT		

IV. SYLLABUS:

MODULE - I: VALUES AND SELF-DEVELOPMENT (04)

Values and self-development. Social values and individual attitudes. Work ethics, Indian vision of humanism. Moral and non- moral valuation. Standards and principles. Value judgments.

MODULE - II: CULTIVATION OF VALUES (06)

Importance of cultivation of values. Sense of duty. Devotion, Self-reliance. Confidence, Concentration. Truthfulness, Cleanliness. Honesty, Humanity. Power of faith, National Unity. Patriotism. Love for nature, Discipline.

MODULE – III: PERSONALITY AND BEHAVIOR DEVELOPMENT (06)

Personality and Behavior Development - Soul and Scientific attitude. Positive Thinking. Integrity and discipline. Punctuality, Love and Kindness. Avoid fault Thinking. Free from anger, Dignity of labor. Universal brotherhood and religious tolerance. True friendship. Happiness Vs suffering, love for truth. Aware of self-destructive habits. Association and Cooperation. Doing best for saving nature.

MODULE – IV: CHARACTER AND COMPETENCE (04)

Character and Competence –Holy books vs Blind faith. Self-management and Good health. Science of reincarnation. Equality, Nonviolence, Humility, Role of Women.

MODULE – V: SELF CONTROL (04)

All religions and same message. Mind your Mind, Self-control. Honesty, Studying effectively.

CONSTITUTION OF INDIA

Course Code	Category	Hours / Week		Hours / Week Credits		Ma	ximum 1	Marks
BHSC05	Audit	L	Т	Р	С	CIA	SEE	Total
		2	-	-	0	30	70	100
Contact Classes: 24	Tutorial Classes: Nil	Practical Classes: Nil			То	tal Class	ses: 24	

I. COURSE OVERVIEW:

The course on the Constitution of India provides students with a comprehensive understanding of the historical context, principles, and structure of the Indian Constitution. It explores the journey and philosophy behind the making of the Indian Constitution, highlighting the vision and ideals of the founding fathers.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The premises informing the twin themes of liberty and freedom from a civil right perspective.
- II. The growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism.
- III. The role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution.

III. COURSE OUTCOMES:

After successful completion of the course, students should be able to:

CO 1	Describe historical background of the constitution making and its importance for	Understand
COT	building a democratic India.	
CO 2	Understand the Constitutional Rights and and duties	Understand
CO_{2}	Explain the functioning of three wings of the government i.e., executive,	Understand
05	legislative and judiciary	
CO_{4}	Analyse the decentralization of power between central, state and local self-	Analyze
CO 4	government.	
CO 5	Apply the knowledge in strengthening of the constitutional institutions like	Apply
05	CAG, Election Commission and UPSC for sustaining democracy	

IV. SYLLABUS:

MODULE – I: HISTORY OF MAKING OF THE INDIAN CONSTITUTION & PHILOSOPHY OF THE INDIAN CONSTITUTION (08)

History of Making of the Indian Constitution: History, Drafting Committee, (Composition & Working) Philosophy of the Indian Constitution: Preamble, Salient Features.

MODULE - II: CONTOURS OF CONSTITUTIONAL RIGHTS & DUTIES (04)

Fundamental Rights, Right to Equality, Right to Freedom, Right against Exploitation, Right to Freedom of Religion, Cultural and Educational Rights, Right to Constitutional Remedies, Directive Principles of State Policy, Fundamental Duties.

MODULE – III: ORGANS OF GOVERNANCE (04)

Parliament, Composition, Qualifications and Disqualifications, Powers and Functions, Executive President, Governor, Council of Minister.

Judiciary, Appointment and Transfer of Judges, Qualifications, Powers and Functions

MODULE – IV: LOCAL ADMINISTRATION (04)

District's Administration head: Role and Importance, Municipalities: Introduction, Mayor and role of Elected

Representative, CEO of Municipal Corporation. Pachayati raj: Introduction, PRI: Zila Pachayat. Elected officials and their roles, CEO Zila Pachayat: Position and role. Block level: Organizational Hierarchy (Different departments), Village level: Role of Elected and Appointed officials, Importance of grass root democracy.

MODULE - V: ELECTION COMMISSION (04)

Election Commission: Role and Functioning. Chief Election Commissioner and Election Commissioners. State Election Commission: Role and Functioning. Institute and Bodies for the welfare of SC/ST/OBC and women.

V. TEXT BOOKS:

PEDAGOGY STUDIES

Course Code	Category	Hours / Week		Hours / Week		Hours / Week		Credits	Ma	ximum M	larks
DUSCOC	Audit	L	Т	Р	С	CIA	SEE	Total			
BHSC00		2	-	-	0	30	70	100			
Contact Classes: 24	Tutorial Classes: Nil	Practical Clas			sses: Nil	То	tal Classe	s: 24			

I. COURSE OVERVIEW:

In this course in pedagogy studies, students gain a solid foundation in educational principles and practices. They develop a deep understanding of effective teaching and learning strategies, empowering them to create engaging and meaningful learning experiences for their future students. Whether pursuing a career in teaching or any other field that involves knowledge transfer, students emerge with the knowledge and skills to inspire and facilitate learning, making a positive impact on the lives of others.

II. COUSE OBJECTIVES:

The students will try to learn:

- I. Review existing evidence on the review topic to inform program design and policy making undertaken by the DFID, other agencies and researchers.
- II. The critical evidence gaps to guide the development.

III. COURSE OUTCOMES:

After successful completion of the course, students should be able to:

CO 1	Identify the Methodology and conceptual framework of teachers education	Understand
CO^{2}	Understand pedagogical practices are being used by teachers in formal and informal	Understand
02	classrooms in developing countries	
CO_{2}	Interpret the evidence on the effectiveness of these pedagogical practices, in what	Understand
05	conditions, and with what population of learners	
CO_{4}	Classify the importance of class room practice, curriculum and learning in	Understand
CO 4	Professional Development.	
CO 5	Summarize teacher education (curriculum and practicum) and the school curriculum	Understand
05	and guidance materials best support effective pedagogy	

IV. SYLLABUS:

MODULE – I: INTRODUCTION (04)

Introduction And Methodology: Aims and rationale, Policy background, Conceptual framework and terminology. Theories of learning, Curriculum, Teacher education. Conceptual framework, Research questions. Overview of methodology and Searching.

MODULE – II: THEMATIC OVERVIEW (04)

Thematic overview: Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries. Curriculum, Teacher education.

MODULE – III: PEDAGOGICAL PRACTICES (06)

Evidence on the effectiveness of pedagogical practices. Methodology for the in-depth stage: quality assessment of included studies. How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? Theory of change.

Strength and nature of the body of evidence for effective pedagogical practices. Pedagogic theory and pedagogical approaches. Teachers' attitudes and beliefs and Pedagogic strategies.

MODULE – IV: PROFESSIONAL DEVELOPMENT (05)

Professional Development: alignment with classroom practices and follows up Support. Peer support. Support from the head teacher and the community. Curriculum and assessment Barriers to learning: limited resources and large class sizes.

MODULE – V: RESEARCH GAPS (05)

Research gaps and future directions, Research design, Contexts, Pedagogy. Teacher education. Curriculum and assessment. Dissemination and research impact.

STRESS MANAGEMENT BY YOGA

Course Code	Category	Hours / Week		Hours / Week		Hours / Week		Credits	Ma	ximum M	larks
DUSC07	Audit	L	Т	Р	С	CIA	SEE	Total			
DISC0/		2	-	-	0	30	70	100			
Contact Classes: 24	Tutorial Classes: Nil	Practical Clas		sses: Nil	То	tal Classe	s: 24				

I. COURSE OVERVIEW:

In a course on stress management by yoga, engineering students learn a variety of yoga techniques and principles that promote physical, mental, and emotional well-being. These techniques include yoga postures (asanas), breathing exercises (pranayama), meditation, and relaxation techniques.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. How to achieve overall health of body and mind.
- II. How to overcome stress.

III. COURSE OUTCOMES:

After successful completion of the course, students should be able to: (Same as R18)

CO 1	Understand Ashtanga yog and its impartance	Understand
CO 2	Identify the Dos and Do nots of Life by practicing the Yam and Niyam	Analyze
CO 3	Interpret the Shaucha and its components	Understand
CO 4	Make use of breathing techniques and Asan and Pranayam	Understand
CO 5	Develop healthy mind in a healthy body thus improving social health also	Apply

IV. SYLLABUS:

MODULE – I: INTRODUCTION (06)

Definitions of Eight parts of yog. (Ashtanga)

MODULE – II: YAM AND NIYAM (04)

Yam and Niyam. Do's and Don't's in life. Ahinsa, satya, astheya, bramhacharya and aparigraha.

MODULE – III: SHAUCHA (05)

Shaucha, santosh, tapa, swadhyay, ishwarpranidhan

MODULE - IV: ASAN AND PRANAYAM (05)

Asan and Pranayam. Various yog poses and their benefits for mind & body

MODULE - V: BREATHING TECHNIQUES (04)

Regularization of breathing techniques and its effects-Types of pranayam

PERSONALITY DEVELOPMENT THROUGH LIFE ENLIGHTENMENT SKILLS

Course Code	Category	Hours / Week			Credits	Ma	aximum N	Marks
DUCCOR	A 3#4	L	Т	Р	С	CIA	SEE	Total
BHSCUS	Audit	2	-	-	0	30	70	100
Contact Classes: 24	Tutorial Classes: Nil	Practical Cla			asses: Nil	Тс	otal Class	es: 24

I. COURSE OVERVIEW:

In this course, students delve into various aspects of personal development and self-awareness. They learn techniques to improve self-confidence, self-esteem, and self-awareness, which are vital for thriving in their engineering careers. Students explore their strengths, weaknesses, values, and beliefs, enabling them to develop a clearer understanding of themselves and their goals.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. How to achieve the highest goal happily.
- II. How a person become with stable mind, pleasing personality and determination.
- III. Awaken wisdom in students.

III. COURSE OUTCOMES:

After successful completion of the course, students should be able to:

CO 1	Summarize steps to develop personality with stable mind, pleasing manners and determination.	Understand
CO 2	Identify day to day work and duties for developing peace and prosperity as depicted in Geeta.	Analyze
CO 3	Formulate the daily life style by depicting the verses from Bhagavatgeetha.	Analyze
CO 4	Outline the verses of Shrimad Bhagavad Geetha for holistic development.	Create
CO 5	Demonstrates personality development by verses of Bhagavatgeetha.	Create

IV. SYLLUBUS:

MODULE – I: HOLISTIC DEVELOPMENT (08)

Neetisatakam-Holistic development of personality, Verses- 19,20,21,22 (wisdom), Verses- 29,31,32 (pride & heroism), Verses- 26,28,63,65 (virtue), Verses- 52,53,59 (dont's), Verses- 71,73,75,78 (do's)

MODULE – II: BHAGWAD GEETA (04)

Approach to day to day work and duties. Shrimad BhagwadGeeta: Chapter 2-Verses 41, 47,48. Chapter 3- Verses 13, 21, 27, 35.

MODULE – III: BHAGWAD GEETA (04)

Shrimad BhagwadGeeta: Chapter 6-Verses 5, 13, 17, 23, 35, Chapter 18-Verses 45, 46, 48.

MODULE – IV: BASIC KNOWLEDGE (04)

Statements of basic knowledge. Shrimad BhagwadGeeta: Chapter2-Verses 56, 62, 68. Chapter 12 - Verses 13, 14, 15, 16,17, 18

MODULE – V: ROLE MODEL (04)

Personality of Role model. Shrimad BhagwadGeeta: Chapter2-Verses 17, Chapter 3-Verses 36,37,42,

Chapter 4-Verses 18, 38,39. Chapter 18 – Verses 37,38,63

BUSINESS SUSTAINABILITY MANAGEMENT

Course Code	Category	Hours / Week		Hours / Week		Hours / Week		Hours / Week		Hours / Week Cred		M	aximum N	Marks
DUSCOO	Audit	L	Т	Р	С	CIA	SEE	Total						
BHSC09		2	-	-	0	30	70	100						
Contact Classes: 24	Tutorial Classes: Nil	Practical Clas			asses: Nil	Total Classes: 24		es: 24						

I. COURSE OVERVIEW:

In this course student will be able to learn sustainability management, business sustainability dimensions, paradigms of business sustainability, sustainability management knowledge and methods.

II. COURSE OBJECTIVES:

The students will try to learn:

- I. The sustainability challenges and opportunities in the global economy.
- II. The design, technology and planning for sustainability.
- III. The regulatory environment and international policies for sustainability.
- IV. The contemporary paradigms of business sustainability.
- V. The design, technology and planning for sustainability management.

III. COURSE OUTCOMES:

After successful completion of the course, students shouldbe able to:

CO 1	Understand sustainability challenges and opportunities in the global economy	Understand			
CO 2	explore opportunities for value creation through stakeholder and partner collaboration	Understand			
CO 3	³ Investigate the potential of technology, design, and innovation to enable or limit U sustainable business practices.				
CO 4	4 Understand product sustainability life cycle and management Underst				
CO 5	Develop proactive plans for enhancing sustainability and resilience of Corporate firms.	Apply			

IV. SYLLABUS:

MODULE – I: INTRODUCTION TO SUSTAINABILITY MANAGEMENT (06)

Definition, nature and characteristics of sustainability management, history of sustainability management, future of sustainability management, sustainability and environmental management, emerging trends in sustainability.

MODULE – II: BUSINESS SUSTAINABILITY DIMENSIONS (04)

Dimensions of Sustainability, Challenges Facing Business, Stakeholders and Stakeholder Management Issues in Sustainability management, sustainability management approaches.

MODULE - III: EMERGING PARADIGMS OF BUSINESS SUSTAINABILITY (06)

Managing sustainability – functional responses, strategy and leadership issues, linkages with External Stakeholders.

Reporting, Measurements and Standards, Emerging Business Issues in Sustainability.

MODULE – IV: PRODUCT SUSTAINABILITY MANAGEMENT (04)

Life Cycle Thinking, Environmental Life Cycle Assessment, Life Cycle Costing Sustainable Procurement, Supply Chain Sustainability, Product Stewardship, Extended Producer Responsibility. **MODULE – V: SUSTAINABILITY MANAGEMENT KNOWLEDGE AND METHODS (04)** Sustainability Business Modeling and the Circular Economy, Impact measurement and Valuation, Digitalization, Data and Sustainability, Sustainability communication, Corporate sustainability management.

FREQUENTLY ASKED QUESTIONS AND ANSWERS ABOUT AUTONOMY

1. Who grants Autonomy? UGC, Govt., AICTE or University

In case of Colleges affiliated to a university and where statutes for grant of autonomy are ready, it is the respective University that finally grants autonomy but only after concurrence from the respective state Government as well as UGC. The State Government has its own powers to grant autonomy directly to Govt. and Govt. aided Colleges.

2. Shall IARE award its own Degrees?

No. Degree will be awarded by Jawaharlal Nehru Technological University, Hyderabad with a mention of the name IARE on the Degree Certificate.

3. What is the difference between a Deemed University and an Autonomy College?

A Deemed University is fully autonomous to the extent of awarding its own Degree. A Deemed University is usually a Non-Affiliating version of a University and has similar responsibilities like any University. An Autonomous College enjoys Academic Autonomy alone. The University to which an autonomous college is affiliated will have checks on the performance of the autonomous college.

4. How will the Foreign Universities or other stake – holders know that we are an Autonomous College?

Autonomous status, once declared, shall be accepted by all the stake holders. The Govt. of Telangana mentions autonomous status during the First Year admission procedure. Foreign Universities and Indian Industries will know our status through our website.

5. What is the change of Status for Students and Teachers if we become Autonomous?

An autonomous college carries a prestigious image. Autonomy is actually earned out of our continued past efforts on academic performances, our capability of self- governance and the kind of quality education we offer.

6. Who will check whether the academic standard is maintained / improved after Autonomy? How will it be checked?

There is a built in mechanism in the autonomous working for this purpose. An Internal Committee called Academic Programme Evaluation Committee, which will keep a watch on the academics and keep its reports and recommendations every year. In addition the highest academic council also supervises the academic matters. The standards of our question papers, the regularity of academic calendar, attendance of students, speed and transparency of result declaration and such other parameters are involved in this process.

7. Will the students of IARE as an Autonomous College qualify for University Medals and Prizes for academic excellence?

No. IARE has instituted its own awards, medals, etc. for the academic performance of the students. However for all other events like sports, cultural on co-curricular organized by the University the students shall qualify.

8. Can IARE have its own Convocation?

No. Since the University awards the Degree the Convocation will be that of the University, but there will be Graduation Day at IARE.

9. Can IARE give a provisional degree certificate?

Since the examinations are conducted by IARE and the results are also declared by IARE, the college sends a list of successful candidates with their final Grades and Grade Point Averages including CGPA to the University. Therefore with the prior permission of the University the college will be entitled to give the provisional certificate.

10. Will Academic Autonomy make a positive impact on the Placements or Employability? Certainly.

The number of students qualifying for placement interviews is expected to improve, due to rigorous and repetitive classroom teaching and continuous assessment. Also the autonomous status is more responsive to the needs of the industry. As a result therefore, there will be a lot of scope for industry oriented skill development built-in into the system. The graduates from an autonomous college will therefore represent better employability.

11. What is the proportion of Internal and External Assessment as an Autonomous College?

Presently, it is 70 % external and 30% internal. As the autonomy matures the internal assessment component shall be increased at the cost of external assessment.

12. Is it possible to have completeInternal Assessment for Theory or Practicals?

Yes indeed. We define our own system. We have the freedom to keep the proportion of external and internal assessment component to choose.

13. Why Credit based Grade System?

The credit based grade system is an accepted standard of academic performance the world over in all Universities. The acceptability of our graduates in the world market shall improve.

14. What exactly is a Credit based Grade System?

The credit based grade system defines a much better statistical way of judging the academic performance. One Lecture Hour per week of Teaching Learning process is assigned One Credit. One hour of laboratory work is assigned half credit. Letter Grades like A, B,C,D, etc. are assigned for a Range of Marks. (e.g. 91% and above is A+, 80 to 90 % could be A etc.) in Absolute Grading System while grades are awarded by statistical analysis in relative grading system. We thus dispense with sharp numerical boundaries. Secondly, the grades are associated with defined Grade Points in the scale of 1 to 10. Weighted Average of Grade Points is also defined Grade Points are weighted by Credits and averaged over total credits in a Semester. This process is repeated for all Semesters and a CGPA defines the Final Academic Performance

15. What are the norms for the number of Credits per Semester and total number of Credits for UG/PG programme?

These norms are usually defined by UGC or AICTE. Usually around 25 Credits per semester is the accepted norm.

16. What is a Semester Grade Point Average (SGPA)?

The performance of a student in a semester is indicated by a number called SGPA. The SGPA is the weighted average of the grade points obtained in all the courses registered by the student during the semester.

$$SGPA = \sum_{i=1}^{n} \left(C_{i} G_{i} \right) / \sum_{i=1}^{n} C_{i}$$

Where, C_i is the number of credits of the *i*th course and G_i is the grade point scored by the student in the *i*th course and *i* represent the number of courses in which a student registered in the concerned semester. SGPA is rounded to two decimal places.

17. What is a Cumulative Grade Point Average (CGPA)?

An up-to-date assessment of overall performance of a student from the time of his first registration is obtained by calculating a number called CGPA, which is weighted average of the grade points obtained in all the courses registered by the students since he entered the Institute.

$$CGPA = \sum_{j=1} (C_i S_i) / \sum_{j=1} C_i$$

Where, S_i is the SGPA of the *i*th semester and C_i is the total number of credits in that semester and *j* represent the number of courses in which a student's is registered upto the semester. CGPA is rounded to two decimal places.

18. Is there any Software available for calculating Grade point averages and converting the same into Grades?

Yes, The institute has its own MIS software for calculation of SGPA,CGPA,etc.

19. Will the teacher be required to do the job of calculating SGPAs etc. and convert the

same into Grades?

No. The teacher has to give marks obtained out of whatever maximum marks as it is. Rest is all done by the computer.

20. Will there be any Revaluation or Re-Examination System?

No. There will double valuation of answer scripts. There will be a make up Examination after a reasonable preparation time after the End Semester Examination for specific cases mentioned in the Rules and Regulations. In addition to this, there shall be a 'summer term' (compressed term) followed by the End Semester Exam, to save the precious time of students.

21. How fast Syllabi can be and should be changed?

Autonomy allows us the freedom to change the syllabi as often as we need.

22. Will the Degree be awarded on the basis of only final year performance?

No. The CGPA will reflect the average performance of all the semester taken together.

23. What are Statutory Academic Bodies?

Governing Body, Academic Council, Examination Committee and Board of Studies are the different statutory bodies. The participation of external members in everybody is compulsory. The institute has nominated professors from IIT, NIT, University (the officers of the rank of Pro-vice Chancellor, Deans and Controller of Examinations) and also the reputed industrialist and industry experts on these bodies.

24. Who takes Decisions on Academic matters?

The Governing Body of institute is the top academic body and is responsible for all the academic decisions. Many decisions are also taken at the lower level like Boards of Studies. Decisions taken at the Board of Studies level are to be ratified at the Academic Council and Governing Body.

25. What is the role of Examination committee?

The Examinations Committee is responsible for the smooth conduct of internal, End Semester and make up Examinations. All matters involving the conduct of examinations, spot valuations, tabulations and preparation of Grade Cards etc fall within the duties of the Examination Committee.

26. Is there any mechanism for Grievance Redressal?

The institute has grievance redressal committee, headed by Dean - Student affairs and Dean - IQAC.

27. How many attempts are permitted for obtaining a Degree?

All such matters are defined in Rules & Regulation

28. Who declares the result?

The result declaration process is also defined. After tabulation work wherein the SGPA, CGPA and final Grades are ready, the entire result is reviewed by the Moderation Committee. Any unusual deviations or gross level discrepancies are deliberated and removed. The entire result is discussed in the Examinations and Result Committee for its approval. The result is then declared on the institute notice boards as well put on the web site and Students Corner. It is eventually sent to the University.

29. Who will keep the Student Academic Records, University or IARE?

It is the responsibility of the Dean, Academics of the Autonomous College to keep and preserve all the records.

30. What is our relationship with the JNT University?

We remain an affiliated college of the JNT University. The University has the right to nominate its members on the academic bodies of the college.

31. Shall we require University approval if we want to start any New Courses?

Yes, It is expected that approvals or such other matters from an autonomous college will receive priority.

32. Shall we get autonomy for PG and Doctoral Programmes also?

Yes, presently our PG programs also enjoying autonomous status

MALPRACTICES RULES

DISCIPLINARY ACTION FOR / IMPROPER CONDUCT IN EXAMINATIONS

S. No	Nature of Malpractices/Improper conduct	Punishment
	If the candidate:	
1. (a)	Possesses or keeps accessible in examination hall, any paper, note book, programmable calculators, cell phones, pager, palm computers or any other form of material concerned with or related to the subject of the examination (theory or practical) in which he is appearing but has not made use of (material shall include any marks on the body of the candidate which can be used as an aid in the subject of the examination)	Expulsion from the examination hall and cancellation of the performance in that subject only.
(b)	Gives assistance or guidance or receives it from any other candidate orally or by any other body language methods or communicates through cell phones with any candidate or persons in or outside the exam hall in respect of any matter. The candidate is also debarred and forfeits the seat.

9.	If student of the college, who is not a candidate for the particular examination or any person not connected with the college indulges in any malpractice or improper conduct mentioned in clause 6 to 8.	Student of the colleges expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year. The candidate is also debarred and forfeits the seat. Person(s) who do not belong to the College will be handed over to police and, a police case will be registered against them
10.	Comes in a drunken condition to the examination hall.	Expulsion from the examination hall and cancellation of the performance in that subject and all other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining examinations of the subjects of that semester/year.
11.	Copying detected on the basis of internal evidence, such as, during valuation or during special scrutiny.	Cancellation of the performance in that subject and all other subjects the candidate has appeared including practical examinations and project work of that semester/year examinations.
12.	If any malpractice is detected which is not covered in the above clauses 1 to 11 shall be reported to the University for further action to award suitable punishment.	

UNDERTAKING BY STUDENT/PARENT

"To make the students attend the classes regularly from the first day of starting of classes and be aware of the College regulations, the following Undertaking Form is introduced which should be signed by both student and parent. The same should be submitted to the Dean, Academic".

I, Mr./Ms ------ joining I Semester for the academic year 2021-2022 in Institute of Aeronautical Engineering, Hyderabad, do hereby undertake and abide by the following terms, and I will bring the ACKNOWLEDGEMENT duly signed by me and my parent and submit it to the Dean, Academic.

- 1. I will attend all the classes as per the timetable from the starting day of the semester specified in the institute Academic Calendar. In case, I do not turn up even after two weeks of starting of classes, I shall be ineligible to continue for the current academic year.
- 2. I will be regular and punctual to all the classes (theory/practical/drawing) and secure attendance of not less than 80% in every course as stipulated by Institute. I am fully aware that an attendance of less than 70% in more than three courses will make me lose one year.
- 3. I will compulsorily follow the dress code prescribed by the college.
- 4. I will conduct myself in a highly disciplined and decent manner both inside the classroom and on campus, failing which suitable action may be taken against me as per the rules and regulations of the institute.
- 5. I will concentrate on my studies without wasting time in the Campus / Hostel / Residence and attend all the tests to secure more than the minimum prescribed Class / Sessional marks in each course. I will submit the assignments given in time to improve my performance.
- 6. I will not use Mobile Phone in the institute premises and also, I will not involve in any form of ragging inside or outside the campus. I am fully aware that using mobile phone to the institute premises is not permissible and involving in Ragging is an offence and punishable as per JNTUH/UGC rules and the law.
- 7. I declare that I shall not indulge in ragging, eve-teasing, smoking, consuming alcohol drug abuse or any other anti-social activity in the college premises, hostel, on educational tours, industrial visits or elsewhere.
- 8. I will pay tuition fees, examination fees and any other dues within the stipulated time as required by the Institution / authorities, failing which I will not be permitted to attend the classes.
- 9. I will not cause or involve in any sort of violence or disturbance both within and outside the college campus.
- 10. If I absent myself continuously for 3 days, my parents will have to meet the concerned HOD / Principal.
- 11. I hereby acknowledge that I have received a copy of PG21 Academic Rules and Regulations, Syllabus copy and hence, I shall abide by all the rules specified in it.

ACKNOWLEDGEMENT

I have carefully gone through the terms of the undertaking mentioned above and I understand that following these are for my/his/her own benefit and improvement. I also understand that if I/he/she fail to comply with these terms, shall be liable for suitable action as per Institute/JNTUH/AICTE/UGC rules and the law. I undertake that I/he/she will strictly follow the above terms.
