Abstract:

The present invention relates to provide an IOT and cloud computing system for assisting criminal investigation system. In the rapidly evolving landscape of law enforcement, technology continues to play a pivotal role in solving crimes and ensuring justice is served. In this era of digital transformation, an innovative Internet of Things (IoT) and Cloud Computing system has emerged, revolutionizing how criminal investigations are conducted. Our preset system is a groundbreaking solution that streamlines, enhances, and expedites the investigative process.

Complete Specification

Description: Technical field of invention:

The present invention relates to provide an IOT and cloud computing system for assisting criminal investigation system.

Background:

Criminal investigations are complex, often involving a multitude of data sources, physical evidence, and witnesses. The traditional methods of evidence collection and analysis have been time-consuming and resource-intensive. However, with the advent of IoT and cloud computing technologies, a paradigm shift has occurred in the field of criminal investigations. The present invention uses these technologies to provide law enforcement agencies with a comprehensive and efficient solution.

Groupings of alternative elements or embodiments of the invention disclosed herein are not to be construed as limitations. Each group member can be referred to individually or in any combination with other members of the group or other elements found herein. One or more members of a group can be included in, deleted from, a group for reasons of convenience and/or patentability. When any such inclusion or deletion occurs, the specification is herein deemed to contain them as modified thus fulfilling the written description of all Markush groups used in the appended claims.
